Macroeconomic projections have changed considerably

GDP growth (%):

Lower Growth from 2022

Inflation²:

A gradual normalisation

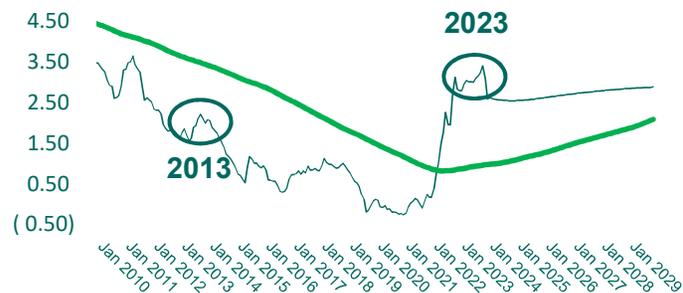

1. Source: Bloomberg; 2. Source: European Commission (November 2023)

Additional revenues by 2025¹ generated by the interest-rate environment

- The Group will continue to benefit from the rise in interest rates that has occurred since 2022, on the back of its fixed-rate loan structure

Illustration: trend in the swap rate (based on forecasts as at 31.12.23) and structural hedges on a 10-year basis

Recent higher interest rates have been only partially transmitted into remuneration of deposits and are gradually being transmitted into fixed-rate loans

The impact of the probable rate cuts in 2024 could lower this benefit and should profit shorter-term lending activities, in particular in Personal Finance, whose financing costs will decline.

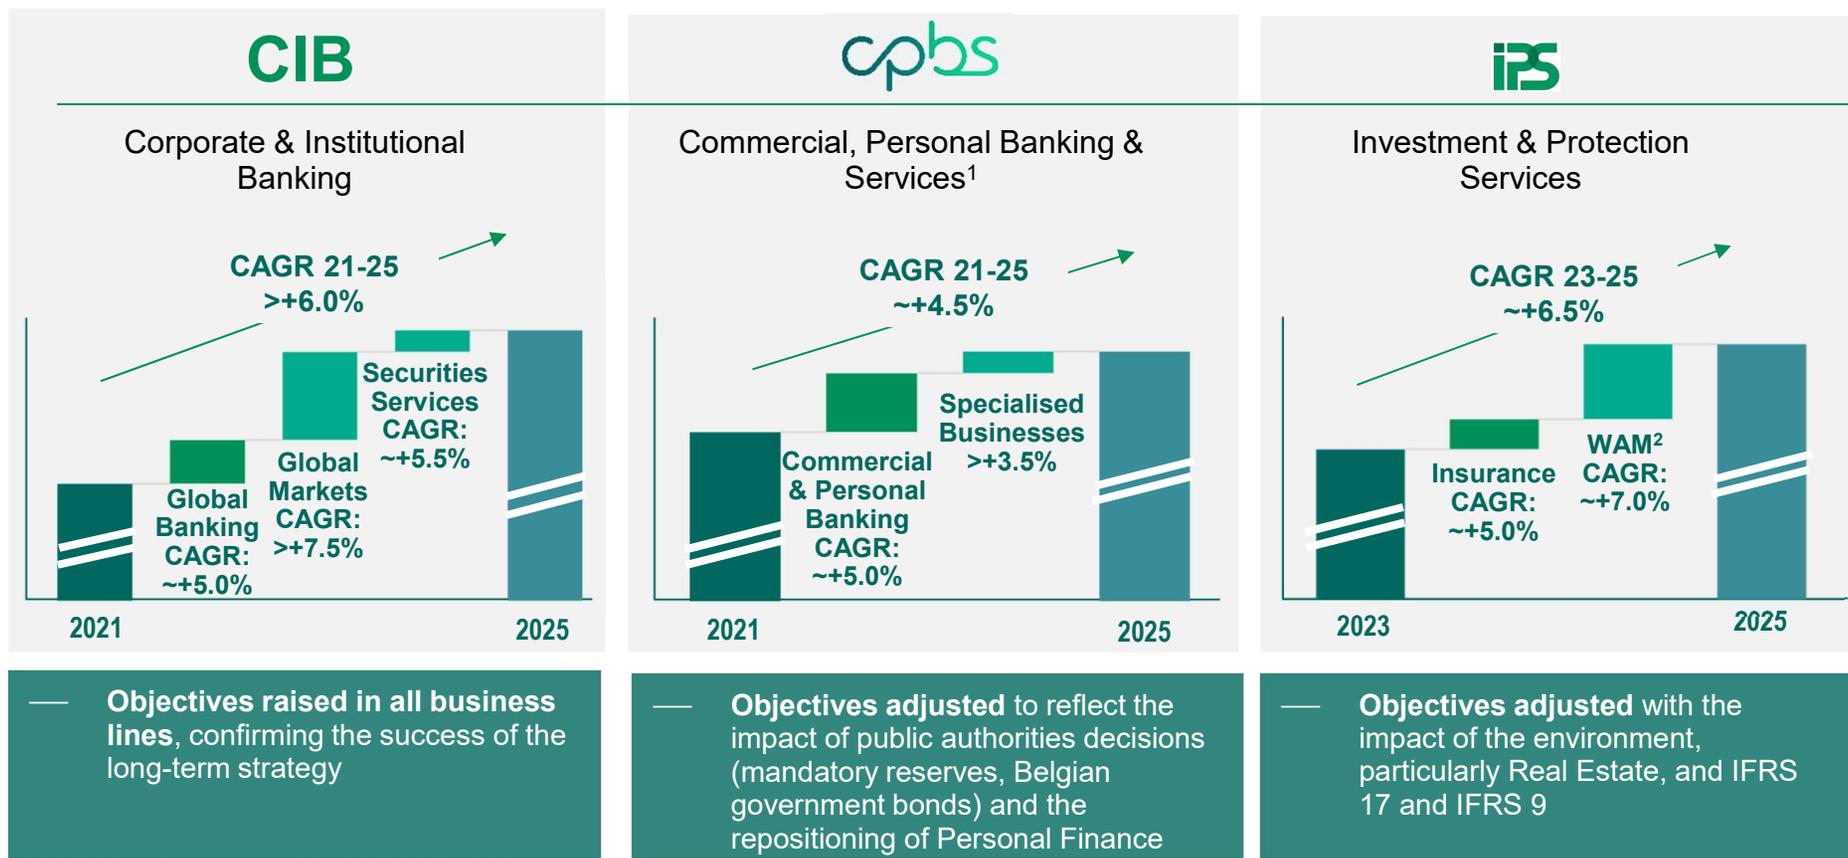

- Potential growth in revenues from the interest-rate environment is expected to be ~€1bn by 2025 compared to 2023²

The €2bn additional revenue target for 2025 is confirmed, based on additional revenues already booked since 2021, in particular in Commercial & Personal Banking, Global Banking et Securities Services

¹ Additional revenues by 2025 compared to the GTS 2025 plan's initial assumptions;
² In Global Banking, Securities Services, Commercial & Personal Banking in the Eurozone and Personal Finance excluding discontinued activities

A cost of risk target of <40 bps confirmed

Proactive and long-term management reflected in a low cost of risk (<40 bps) since 2017¹
