# CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

Prepared in accordance with IFRS as adopted by the European Union

The Board of directors of BNP Paribas examined the Group condensed consolidated interim financial statements on 23 July 2025. The condensed consolidated financial statements of the BNP Paribas Group are presented for the first halves 2025 and 2024. In accordance with Annex I of European Delegated Regulation (EU) n° 2019/980 as amended by Delegated Regulation (EU) n° 2020/1273, the first half 2023 is provided in the amendment, registered on 2 August 2024 under number D.24-0158-A02, to the Universal registration document filed with the Autorité des Marchés Financiers on 22 March 2024 under number D.24-0158.

# NOTES TO THE FINANCIAL STATEMENTS

Prepared in accordance with IFRS as adopted by the European Union

## 1. MATERIAL ACCOUNTING POLICIES APPLIED BY THE GROUP

### 1.a ACCOUNTING STANDARDS

#### 1.a.1 APPLICABLE ACCOUNTING STANDARDS

The consolidated financial statements of the BNP Paribas Group have been prepared in accordance with international accounting standards (International Financial Reporting Standards – IFRS), as adopted for use in the European Union<sup>1</sup>. Accordingly, certain provisions of IAS 39 on hedge accounting have been excluded.

These condensed consolidated interim financial statements have been prepared in accordance with IAS 34 “Interim Financial Reporting”. Some information on the nature and extent of risks relating to financial instruments as required by IFRS 7 “Financial Instruments: Disclosures” are presented in the amendment A02 of the Universal Registration Document. This information provides credit risk exposures and related impairment broken down according to whether the underlying loans are performing or non performing, by geographic area and by industry. This information is an integral part of the notes to the BNP Paribas Group’s consolidated financial statements at 30 June 2025.

- Further to the Pillar II recommendations of the Organisation for Economic Cooperation and Development (OECD) in relation to the international tax reform, the European Union adopted in December 2022 the 2022/2523 directive instituting a minimum corporate income tax for international groups, effective 1 January 2024. This directive was transposed by the 2024 Finance Act in France in December 2023.

To clarify the directive’s potential impacts, on 23 May 2023 the IASB issued a series of amendments to IAS 12 “Income Taxes”, which were adopted by the European Union on 8 November 2023. In accordance with the provisions of these amendments, the Group applies the mandatory and temporary exception not to recognise deferred taxes associated with this additional taxation.

The impact of the Pillar II reform is non-material for the Group. Income before tax and corporate income tax by country are presented in chapter 8 of the 2024 Universal registration document (part 8.6, section II. *Profit and Loss account items and headcount by country*).

The introduction of other standards, amendments and interpretations that are mandatory as from 1 January 2025 had no effect on the Group’s financial statements at 30 June 2025.

#### 1.a.2 NEW MAJOR ACCOUNTING STANDARDS, PUBLISHED BUT NOT YET APPLICABLE

The Group did not early apply new standards, amendments and interpretations endorsed by the European Union when the application in 2025 was optional.

The impact assessment of the new standards and amendments not yet applicable by the Group is presented below:

<sup>1</sup> The full set of standards adopted for use in the European Union can be found on the website of the European Commission at: [https://ec.europa.eu/info/business-economy-euro/company-reporting-and-auditing/company-reporting\\_en](https://ec.europa.eu/info/business-economy-euro/company-reporting-and-auditing/company-reporting_en)

**Amendments to IFRS 9 "Financial Instruments" and IFRS 7 "Financial Instruments: Disclosures" relating to the classification and measurement of financial instruments.**

On 30 May 2024, the IASB published amendments to IFRS 9 and IFRS 7. These amendments approved by the European Commission on 27 May 2025, which will be applicable for annual periods beginning on 1 January 2026. These amendments:

- clarify the date of recognition and derecognition of certain financial assets and liabilities, with a new exception for certain financial liabilities settled through an electronic payment system;
- clarify and add indications for assessing whether a financial asset meets the cash flow criterion, e.g. its cash flows are solely payments of principal and interest on the principal outstanding (SPPI);
- require disclosures in the notes to financial statements for certain instruments with contractual terms that can change the time or amount of cash flows upon the occurrence or non-occurrence of a contingent event (e.g. financial instruments with characteristics linked to the achievement of environmental, social and governance objectives); and
- update the information requirements for equity instruments designated at fair value through equity.

The impact analysis is ongoing, but the Group does not expect these amendments to have a significant impact on the Group's consolidated financial statements.

**Publication of IFRS 18 "Presentation and disclosure in financial statements" in replacement of IAS 1 "Presentation of Financial Statements".**

IFRS 18 will be mandatory from 1 January 2027, with retrospective application.

IFRS 18 includes many of the requirements of IAS 1 without changes and supplements them with new requirements relating to:

- the presentation of specific categories (operating, investment and financing) and sub-totals in the statement of profit or loss account;
- information to be disclosed in the notes to the financial statements on management-defined performance measures (MPM);
- aggregation and disaggregation of information in the statement of profit or loss account.

The Bank is currently assessing the detailed implications of applying IFRS 18 to the Group's consolidated financial statements.

## **1.b CONSOLIDATION**

### **1.b.1 SCOPE OF CONSOLIDATION**

The consolidated financial statements of BNP Paribas include entities that are controlled by the Group, jointly controlled, and under significant influence, with the exception of those entities whose consolidation is regarded as immaterial to the Group. Companies that hold shares in consolidated companies are also consolidated.

Subsidiaries are consolidated from the date on which the Group obtains effective control. Entities under temporary control are included in the consolidated financial statements until the date of disposal.

## 1.b.2 CONSOLIDATION METHODS

### *Exclusive control*

Controlled enterprises are fully consolidated. The Group controls a subsidiary when it is exposed, or has rights, to variable returns from its involvement with the entity and has the ability to affect those returns through its power over the entity.

For entities governed by voting rights, the Group generally controls the entity if it holds, directly or indirectly, the majority of the voting rights (and if there are no contractual provisions that alter the power of these voting rights) or if the power to direct the relevant activities of the entity is conferred on it by contractual agreements.

Structured entities are entities established so that they are not governed by voting rights, for instance when those voting rights relate to administrative tasks only, whereas the relevant activities are directed by means of contractual arrangements. They often have the following features or attributes: restricted activities, a narrow and well-defined objective and insufficient equity to permit them to finance their activities without subordinated financial support.

For these entities, the analysis of control shall consider the purpose and design of the entity, the risks to which the entity is designed to be exposed and to what extent the Group absorbs the related variability. The assessment of control shall consider all facts and circumstances able to determine the Group's practical ability to make decisions that could significantly affect its returns, even if such decisions are contingent on uncertain future events or circumstances.

In assessing whether it has power, the Group considers only substantive rights which it holds or which are held by third parties. For a right to be substantive, the holder must have the practical ability to exercise that right when decisions about the relevant activities of the entity need to be made.

Control is reassessed if facts and circumstances indicate that there are changes to one or more of the elements of control.

Where the Group contractually holds the decision-making power, for instance where the Group acts as fund manager, it shall determine whether it is acting as agent or principal. Indeed, when associated with a certain level of exposure to the variability of returns, this decision-making power may indicate that the Group is acting on its own account and that it thus has control over those entities.

Minority interests are presented separately in the consolidated profit and loss account and balance sheet within consolidated equity. The calculation of minority interests takes into account the outstanding cumulative preferred shares classified as equity instruments issued by subsidiaries, when such shares are held outside the Group.

As regards fully consolidated funds, units held by third-party investors are recognised as debts at fair value through profit or loss, inasmuch as they are redeemable at fair value at the subscriber's initiative.

For transactions resulting in a loss of control, any equity interest retained by the Group is remeasured at its fair value through profit or loss.

### *Joint control*

Where the Group carries out an activity with one or more partners, sharing control by virtue of a contractual agreement which requires unanimous consent on relevant activities (those that significantly affect the entity's returns), the Group exercises joint control over the activity. Where the jointly controlled activity is structured through a separate vehicle in which the partners have rights to the net assets, this joint venture is accounted for using the equity method. Where the jointly controlled activity is not structured through a separate vehicle or where the partners have rights to the assets and obligations for the liabilities of the jointly controlled activity, the Group accounts for its share of the assets, liabilities, revenues and expenses in accordance with the applicable IFRS.

### Significant influence

Companies over which the Group exercises significant influence or associates are accounted for by the equity method. Significant influence is the power to participate in the financial and operating policy decisions of a company without exercising control. Significant influence is presumed to exist when the Group holds, directly or indirectly, 20% or more of the voting rights of a company. Interests of less than 20% can be included in the consolidation scope if the Group effectively exercises significant influence. This is the case for example for entities developed in partnership with other associates, where the BNP Paribas Group participates in strategic decisions of the enterprise through representation on the Board of directors or equivalent governing body, or exercises influence over the enterprise's operational management by supplying management systems or senior managers, or provides technical assistance to support the enterprise's development.

Changes in the net assets of associates (companies accounted for under the equity method) are recognised on the assets side of the balance sheet under "Investments in equity-method entities" and in the relevant component of shareholders' equity. Goodwill recorded on associates is also included under "Equity-method investments".

Whenever there is an indication of impairment, the carrying amount of the investment consolidated under the equity method (including goodwill) is subjected to an impairment test, by comparing its recoverable value (the higher of value-in-use and market value less costs to sell) to its carrying amount. Where appropriate, impairment is recognised under "Share of earnings of equity-method entities" in the consolidated income statement and can be reversed at a later date.

If the Group's share of losses of an equity-method entity equals or exceeds the carrying amount of its investment in this entity, the Group discontinues including its share of further losses. The investment is reported at nil value. Additional losses of the equity-method entity are provided for only to the extent that the Group has contracted a legal or constructive obligation or has made payments on behalf of this entity.

Where the Group holds an interest in an associate, directly or indirectly through an entity that is a venture capital organisation, a mutual fund, an open-ended investment company or similar entity such as an investment-related insurance fund, it may elect to measure that interest at fair value through profit or loss.

Realised gains and losses on investments in consolidated undertakings are recognised in the profit and loss account under "Net gain on non-current assets".

The consolidated financial statements are prepared using uniform accounting policies for similar transactions and other events occurring in similar circumstances.

For transactions resulting in a loss of significant influence, any equity interest retained by the Group is accounted for in accordance with IFRS 9 principles applicable to financial instruments held.

## 1.b.3 CONSOLIDATION RULES

### • Elimination of intragroup balances and transactions

Intragroup balances arising from transactions between consolidated enterprises, and the transactions themselves (including income, expenses and dividends), are eliminated. Profits and losses arising from intragroup sales of assets are eliminated, except where there is an indication that the asset sold is impaired. Unrealised gains and losses included in the value of financial instruments at fair value through equity are maintained in the consolidated financial statements.

By way of exception, amendments to IAS 32 and IFRS 9 allow intragroup assets to be retained in the balance sheet if they are held as underlying components of direct participating contracts. These assets are measured at fair value through profit or loss. These are:

- own shares by amendment to IAS 32 ;
- financial liabilities issued by the entity in amendment to IFRS 9.

These provisions are applied by the Group's insurance entities that issue direct participating contracts, the underlying elements of which include securities issued by the Group either directly or through consolidated investment entities.

- **Translation of accounts expressed in foreign currencies**

The consolidated financial statements of BNP Paribas are prepared in euros.

The financial statements of enterprises whose functional currency is not the euro are translated using the closing rate method. Under this method, all assets and liabilities, both monetary and non-monetary, are translated using the spot exchange rate at the balance sheet date. Income and expense items are translated at the average rate for the period.

Financial statements of the Group's subsidiaries located in hyperinflationary economies, previously adjusted for inflation by applying a general price index, are translated using the closing rate. This rate applies to the translation of assets and liabilities as well as income and expenses.

Differences arising from the translation of balance sheet items and profit and loss items are recorded in shareholders' equity under "Exchange differences", and in "Minority interests" for the portion attributable to outside investors. Under the optional treatment permitted by IFRS 1, the Group has reset to zero all translation differences, by booking all cumulative translation differences attributable to shareholders and to minority interests in the opening balance sheet at 1 January 2004 to retained earnings.

On liquidation or disposal of some or all of an interest held in a foreign enterprise located outside the eurozone, leading to a change in the nature of the investment (loss of control, loss of significant influence or loss of joint control without keeping a significant influence), the cumulative exchange difference at the date of liquidation or sale is recognised in the profit and loss account.

Should the percentage of interest change without leading to a modification in the nature of the investment, the exchange difference is reallocated between the portion attributable to shareholders and that attributable to minority interests if the entity is fully consolidated; if the entity is consolidated under the equity method, it is recorded in profit or loss for the portion related to the interest sold.

#### **1.b.4 BUSINESS COMBINATIONS AND MEASUREMENT OF GOODWILL**

- **Business combinations**

Business combinations are accounted for using the purchase method.

Under this method, the acquiree's identifiable assets and liabilities assumed are measured at fair value at the acquisition date except for non-current assets classified as assets held for sale which are accounted for at fair value less costs to sell.

The acquiree's contingent liabilities are not recognised in the consolidated balance sheet unless they represent a present obligation on the acquisition date and their fair value can be measured reliably.

The cost of a business combination is the fair value, at the date of exchange, of assets given, liabilities incurred or assumed, and equity instruments issued to obtain control of the acquiree. Costs directly attributable to the business combination are treated as a separate transaction and recognised through profit or loss.

Any contingent consideration is included in the cost, as soon as control is obtained, at fair value on the date when control was acquired. Subsequent changes in the value of any contingent consideration recognised as a financial liability are recognised through profit or loss.

The Group may recognise any adjustments to the provisional accounting within 12 months of the acquisition date.

Goodwill represents the difference between the cost of the combination and the acquirer's interest in the net fair value of the identifiable assets and liabilities of the acquiree at the acquisition date. Positive goodwill is recognised in the acquirer's balance sheet, while negative goodwill is recognised immediately in profit or loss, on the acquisition date. Minority interests are measured at their share of the fair value of the acquiree's identifiable assets and liabilities. However, for each business combination, the Group can elect to measure minority interests at fair value, in which case a proportion of goodwill is allocated to them. To date, the Group has never used this latter option.

Goodwill is recognised in the functional currency of the acquiree and translated at the closing exchange rate.

On the acquisition date, any previously held equity interest in the acquiree is remeasured at its fair value through profit or loss. In the case of a step acquisition, the goodwill is therefore determined by reference to the acquisition-date fair value.

Since the revised IFRS 3 has been applied prospectively, business combinations completed prior to 1 January 2010 were not restated for the effects of changes to IFRS 3.

As permitted under IFRS 1, business combinations that took place before 1 January 2004 and were recorded in accordance with the previously applicable accounting standards (French GAAP), had not been restated in accordance with the principles of IFRS 3.

Specificities relating to insurance contracts acquired through business combinations are set out in note 1.g.2 in the paragraph *Recognition and derecognition*.

- **Measurement of goodwill**

The BNP Paribas Group tests goodwill for impairment on a regular basis.

- Cash-generating units

The BNP Paribas Group has split all its activities into cash-generating units<sup>2</sup> representing major business lines. This split is consistent with the Group's organisational structure and management methods, and reflects the independence of each unit in terms of results and management approach. It is reviewed on a regular basis in order to take account of events likely to affect the composition of cash-generating units, such as acquisitions, disposals and major reorganisations.

- Testing cash-generating units for impairment

Goodwill allocated to cash-generating units is tested for impairment annually and whenever there is an indication that a unit may be impaired, by comparing the carrying amount of the unit with its recoverable amount. If the recoverable amount is less than the carrying amount, an irreversible impairment loss is recognised, and the goodwill is written down by the excess of the carrying amount of the unit over its recoverable amount.

- Recoverable amount of a cash-generating unit

The recoverable amount of a cash-generating unit is the higher of the fair value of the unit less costs to sell, and its value in use.

Fair value is the price that would be obtained from selling the unit at the market conditions prevailing at the date of measurement, as determined mainly by reference to actual prices of recent transactions involving similar entities or on the basis of stock market multiples for comparable companies.

Value in use is based on an estimate of the future cash flows to be generated by the cash-generating unit, derived from the annual forecasts prepared by the unit's management and approved by Group Executive Management, and from analyses of changes in the relative positioning of the unit's activities on their market. These cash flows are discounted at a rate that reflects the return that investors would require from an investment in the business sector and region involved.

---

<sup>2</sup> As defined by IAS 36.

## 1.c TRANSLATION OF FOREIGN CURRENCY TRANSACTIONS

The methods used to account for assets and liabilities relating to foreign currency transactions entered into by the Group, and to measure the foreign exchange risk arising on such transactions, depend on whether the asset or liability in question is classified as a monetary or a non-monetary item.

- **Monetary assets and liabilities<sup>3</sup> expressed in foreign currencies**

Monetary assets and liabilities expressed in foreign currencies are translated into the functional currency of the relevant Group entity at the closing rate. Foreign exchange differences are recognised in the profit and loss account, except for those arising from financial instruments designated as a cash flow hedge or a net foreign investment hedge, which are recognised in shareholders' equity.

- **Non-monetary assets and liabilities expressed in foreign currencies**

Non-monetary assets may be measured either at historical cost or at fair value. Non-monetary assets expressed in foreign currencies are translated using the exchange rate at the date of the transaction (i.e. date of initial recognition of the non-monetary asset) if they are measured at historical cost, and at the closing rate if they are measured at fair value.

Foreign exchange differences relating to non-monetary assets denominated in foreign currencies and recognised at fair value (equity instruments) are recognised in profit or loss when the asset is classified in "Financial assets at fair value through profit or loss" and in equity when the asset is classified under "Financial assets at fair value through equity".

## 1.d FINANCIAL INFORMATION IN HYPERINFLATIONARY ECONOMIES

The Group applies IAS 29 to the presentation of the accounts of its consolidated subsidiaries located in countries whose economies are in hyperinflation.

IAS 29 presents a number of quantitative and qualitative criteria to assess whether an economy is hyperinflationary, including a cumulative, three-year inflation rate approaching or exceeding 100%.

IAS 29 standard requires that the balance sheet and the profit or loss amounts not already expressed in terms of the measuring unit current at the end of the reporting period be restated by applying a general price index.

For this purpose:

- All non-monetary assets and liabilities of subsidiaries in hyperinflationary countries, including equity, are restated on the basis of changes in the Consumer Price Index (CPI) from the date of initial recognition in the balance sheet to the end of the reporting period. Each line of the profit and loss account is restated on the basis of changes in CPI between the dates when the transactions were realised and the end of the reporting period.
- Assets and liabilities linked by agreement to changes in prices, such as index linked bonds and loans, are adjusted at the reporting date in accordance with the agreement.

In a period of inflation, an entity holding an excess of monetary assets over monetary liabilities loses purchasing power and an entity with an excess of monetary liabilities over monetary assets gains purchasing power to the extent the assets and liabilities are not linked to a price level.

The gain or loss on the net monetary position, which reflects this gain or loss on purchasing power incurred by the Group during the reporting period, may be derived as the difference resulting from the restatement of non-monetary assets, equity and the profit and loss account and the adjustment of index linked assets and liabilities. This gain or loss is recognised under "Net gain on non-current assets".

Financial statements of these subsidiaries are then translated into euros at the closing rate.

<sup>3</sup> Monetary assets and liabilities are assets and liabilities to be received or paid in fixed or determinable amounts of cash.

In accordance with the provisions of the IFRIC's decision of March 2020 on classifying the effects of indexation and translation of accounts of subsidiaries in hyperinflationary economies, the Group has opted to present these effects (including the net book value effect at the date of the initial application of IAS 29) within changes in assets and liabilities recognised directly through equity related to exchange differences.

Since 1 January 2022, the Group has applied IAS 29 to the presentation of the accounts of its consolidated subsidiaries located in Türkiye.

## **1.e NET INTEREST INCOME, INCOME AND EXPENSES FROM COMMISSIONS AND OTHER ACTIVITIES**

### **1.e.1 NET INTEREST INCOME**

Income and expenses relating to debt instruments measured at amortised cost and at fair value through shareholders' equity are recognised in the income statement using the effective interest rate method.

The effective interest rate is the rate that ensures that the discounted estimated future cash flows through the expected life of the financial instrument or, when appropriate, a shorter period, is equal to the carrying amount of the asset or liability in the balance sheet. The effective interest rate measurement takes into account all fees received or paid that are an integral part of the effective interest rate of the contract, transaction costs, and premiums and discounts.

Commissions considered as an additional component of interest are included in the effective interest rate and are recognised in the profit and loss account in "Net interest income". This category includes notably commissions on financing commitments when it is considered that the setting up of a loan is more likely than unlikely. Commissions received in respect of financing commitments are deferred until they are drawn and then included in the effective interest rate calculation and amortised over the life of the loan. Syndication commissions are also included in this category for the portion of the commission equivalent to the remuneration of other syndication participants.

### **1.e.2 INCOME AND EXPENSES FROM COMMISSIONS AND OTHER ACTIVITIES**

Commissions received with regards to banking and similar services provided (except for those that are integral part of the effective interest rate), revenues from property development and revenues from services provided in connection with lease contracts fall within the scope of IFRS 15 "Revenue from Contracts with Customers".

This standard defines a single model for recognising revenue based on principles set out in five steps. These five steps enable to identify the distinct performance obligations included in the contracts and allocate the transaction price among them. The income related to those performance obligations is recognised as revenue when the latter are satisfied, namely when the control of the promised goods or services has been transferred.

The price of a service may contain a variable component. Variable amounts may be recognised in the income statement only if it is highly probable that the amounts recorded will not result in a significant downward adjustment.

## Commission income and expense

The Group records commission income and expense in profit or loss either:

- over time as the service is rendered when the client receives continuous service. These include, for example, certain commissions on transactions with customers when services are rendered on a continuous basis, commissions on financing commitments that are not included in the interest margin, because the probability that they give rise to the drawing up of a loan is low, commissions on financial collateral, clearing commissions on financial instruments, commissions related to trust and similar activities, securities custody fees, *etc.*

Commissions received under financial guarantee commitments are deemed to represent the initial fair value of the commitment. The resulting liability is subsequently amortised over the term of the commitment, in commission income; or

- at a point in time when the service is rendered, in other cases. These include, for example, distribution fees received, loan syndication fees remunerating the arrangement service, advisory fees, *etc.*

## Income and expenses from other activities

Margins on property development, lease payments received on operating leases, as well as income and expenses from services provided in connection with lease contracts are recorded under "Income from other activities" in the profit or loss account.

The asset depreciation charge for assets held by the Group for its leasing activity are recognised in "Expense on other activities" line item.

With regard to the revenues and expenses composing the margins of property development transactions, the Group records them in the profit or loss account:

- over time, when the performance obligation creates or enhances an asset over which the customer obtains control as it is created or enhanced (e.g. work in progress controlled by the client on the land on which the asset is located, *etc.*), or where the service performed does not create an asset that the entity could otherwise use and gives it an enforceable right to payment for performance completed to date. This is the case for contracts such as VEFA (sale in the future state of completion) in France;
- at completion in other cases.

Provisions and impairment are recognised when the margin above is negative (provisions for onerous contracts and inventories impairment).

Regarding income from services provided in connection with lease contracts, the Group records them in profit or loss as the service is rendered, i.e. in proportion to the costs incurred for maintenance contracts. The corresponding expenses are recognised when the service is rendered. At the same time, provisions are recognised to cover risks mainly related to services provided like risk retention and relay-assistance vehicles.

## 1.f FINANCIAL ASSETS AND LIABILITIES

Financial assets are classified at amortised cost, at fair value through shareholders' equity or at fair value through profit or loss depending on the business model and the contractual features of the instruments at initial recognition.

Financial liabilities are classified at amortised cost or at fair value through profit or loss at initial recognition.

Financial assets and liabilities are recognised in the balance sheet when the Group becomes a party to the contractual provisions of the instrument. Purchases and sales of financial assets made within a period established by the regulations or by a convention in the relevant marketplace are recognised in the balance sheet at the settlement date.

### 1.f.1 FINANCIAL ASSETS AT AMORTISED COST

Financial assets are classified at amortised cost if the following two criteria are met: the business model objective is to hold the instrument in order to collect the contractual cash flows and the cash flows consist solely of payments relating to principal and interest on the principal.

This category includes, in particular, loans granted by the Group, as well as reverse repurchase agreements and securities held by the Group ALM Treasury in order to collect contractual flows and which meet the cash flow criterion.

#### Business model criterion

Financial assets are managed within a business model whose objective is to hold financial assets in order to collect cash flows through the collection of contractual payments over the life of the instrument.

The realisation of disposals close to the maturity of the instrument and for an amount close to the remaining contractual cash flows, or due to an increase in the counterparty's credit risk is consistent with a business model whose objective is to collect the contractual cash flows ("collect"). Sales imposed by regulatory requirements or to manage the concentration of credit risk (without an increase in the asset's credit risk) are also consistent with this business model when they are infrequent or insignificant in value.

#### Cash flow criterion

The cash flow criterion is satisfied if the contractual terms of the debt instrument give rise, on specified dates, to cash flows that are solely repayments of principal and interest on the principal amount outstanding.

The criterion is not met in the event of a contractual characteristic that exposes the holder to risks or to the volatility of contractual cash flows that are inconsistent with those of a non-structured or "basic lending" arrangement. It is also not satisfied in the event of leverage that increases the variability of the contractual cash flows.

Interest consists of consideration for the time value of money, for the credit risk, and for the remuneration of other risks (e.g. liquidity risk), costs (e.g. administration fees), and a profit margin consistent with that of a basic lending arrangement. The existence of negative interest does not call into question the cash flow criterion.

The time value of money is the component of interest - usually referred to as the "rate" component - which provides consideration for only the passage of time. The relationship between the interest rate and the passage of time must not be modified by specific characteristics that could call into question the respect of the cash flow criterion.

Thus, when the variable interest rate of the financial asset is periodically reset at a frequency that does not match the duration for which the interest rate is established, the time value of money may be considered as modified and, depending on the significance of that modification, the cash flow criterion may not be met. Some financial assets held by the Group present a mismatch between the interest rate reset frequency and the maturity of the index, or interest rates indexed to an average of benchmark rate. The Group has developed a consistent methodology for analysing this alteration of the time value of money.

Regulated rates meet the cash flow criterion when they provide consideration that is broadly consistent with the passage of time and do not expose to risks or volatility in the contractual cash flows that would be inconsistent with those of a basic lending arrangement (example: loans granted in the context of *Livret A* savings accounts).

Some contractual clauses may change the timing or the amount of cash flows. Early redemption options do not call into question the cash flow criterion if the prepayment amount substantially represents the principal amount outstanding and the interest thereon, which may include reasonable compensation for the early termination of the contract. For example, as regards loans to retail customers, the compensation limited to 6 months of interest or 3% of the capital outstanding is considered reasonable. Actuarial penalties, corresponding to the present value of the difference between the residual contractual cash flows of the loan, and their reinvestment in a loan to a similar counterparty or in the interbank market for a similar residual maturity are also considered as reasonable, even when the compensation can be positive or negative (i.e. "symmetric" compensation). An option that permits the issuer or the holder of a financial instrument to change the interest rate from floating to fixed rate does not breach the cash flow criterion if the fixed rate is determined at origination, or if it represents the time value of money for the residual maturity of the instrument at the date of exercise of the option. Clauses included in financing granted to encourage the sustainable development of companies which adjust the interest margin depending on the achievement of environmental, social or governance (ESG) objectives and disclosed in chapter 7 of the Universal

registration document, do not call into question the cash flow criterion when such an adjustment is considered to be minimal. Structured instruments indexed to ESG market indices do not meet the cash flow criterion.

In the particular case of financial assets contractually linked to payments received on a portfolio of underlying assets and which include a priority order for payment of cash flows between investors ("tranches"), thereby creating concentrations of credit risk, a specific analysis is carried out. The contractual characteristics of the tranche and those of the underlying financial instrument portfolios must meet the cash flow criterion and the credit risk exposure of the tranche must be equal to or lower than the exposure to credit risk of the underlying pool of financial instruments.

Certain loans may be "non-recourse", either contractually, or in substance when they are granted to a special purpose entity. That is in particular the case of numerous project financing or asset financing loans. The cash flow criterion is met as long as these loans do not represent a direct exposure on the assets acting as collateral. In practice, the sole fact that the financial asset explicitly gives rise to cash flows that are consistent with payments of principal and interest is not sufficient to conclude that the instrument meets the cash flow criterion. In that case, the particular underlying assets to which there is limited recourse shall be analysed using the "look-through" approach. If those assets do not themselves meet the cash flow criterion, the existing credit enhancement is assessed. The following aspects are considered: structuring and sizing of the transaction, own funds level of the structure, expected source of repayment, price volatility of the underlying assets.

## Recognition

On initial recognition, financial assets are recognised at fair value, including transaction costs directly attributable to the transaction as well as commissions related to the origination of the loans.

They are subsequently measured at amortised cost, including accrued interest and net of repayments of principal and interest during the past period. These financial assets are also subject from their initial recognition, to the measurement of a loss allowance for expected credit losses (note 1.f.5).

Interest is calculated using the effective interest method determined at inception of the contract.

### 1.f.2 FINANCIAL ASSETS AT FAIR VALUE THROUGH SHAREHOLDERS' EQUITY

#### Debt instruments

Debt instruments are classified at fair value through shareholders' equity if the following two criteria are met:

- business model criterion: financial assets are held in a business model whose objective is achieved by both holding the financial assets in order to collect contractual cash flows and selling the financial assets ("collect and sale"). The latter is not incidental but is an integral part of the business model;
- cash flow criterion: the principles are identical to those applicable to financial assets at amortised cost.

The securities held by the Group ALM Treasury in order to collect contractual flows or to be sold and meeting the cash flow criterion are in particular classified in this category.

On initial recognition, financial assets are recognised at their fair value, including transaction costs directly attributable to the transaction. They are subsequently measured at fair value and changes in fair value are recognised, under a specific line of shareholders' equity entitled "Changes in assets and liabilities recognised directly in equity that may be reclassified to profit or loss". These financial assets are also subject to the measurement of a loss allowance for expected credit losses on the same approach as for debt instruments at amortised cost. The counterparty of the related impact in cost of risk is recognised in the same specific line of shareholders' equity. On disposal, changes in fair value previously recognised in shareholders' equity are reclassified to profit or loss.

In addition, interest is recognised in the income statement using the effective interest method determined at the inception of the contract.

## Equity instruments

Investments in equity instruments such as shares are classified on option, and on a case-by-case basis, at fair value through shareholders' equity (under a specific line). On disposal of the shares, changes in fair value previously recognised in equity are not recognised in profit or loss. Only dividends, if they represent remuneration for the investment and not repayment of capital, are recognised in profit or loss. These instruments are not subject to impairment.

Investments in mutual funds puttable to the issuer do not meet the definition of equity instruments. They do not meet the cash flow criterion either, and thus are recognised at fair value through profit or loss.

### 1.f.3 FINANCING AND GUARANTEE COMMITMENTS

Financing and financial guarantee commitments that are not recognised at fair value through profit or loss are presented respectively in notes 6.a and 6.b. They are subject to the measurement of a loss allowance for expected credit losses. These loss allowances are presented under "Provisions for contingencies and charges".

The Group may issue performance guarantees in conjunction with integral indemnity agreements that provide the Group the right to claim back any amounts paid out from the party whose non-performance would have led to the guarantee being called. This type of commitment exposes the Group to credit risk and therefore results in the recognition of expected credit losses.

### 1.f.4 REGULATED SAVINGS AND LOAN CONTRACTS

Home savings accounts (*Comptes Épargne-Logement* – "CEL") and home savings plans (*Plans d'Épargne Logement* – "PEL") are government-regulated retail products sold in France. They combine a savings phase and a loan phase which are inseparable, with the loan phase contingent upon the savings phase.

These products contain two types of obligations for BNP Paribas: an obligation to pay interest on the savings for an indefinite period, at a rate set by the government at the inception of the contract (in the case of PEL products) or at a rate reset every six months using an indexation formula set by law (in the case of CEL products); and an obligation to lend to the customer (at the customer's option) an amount contingent upon the rights acquired during the savings phase, at a rate set at the inception of the contract (in the case of PEL products) or at a rate contingent upon the savings phase (in the case of CEL products).

The Group's future obligations with respect to each generation (in the case of PEL products, a generation comprises all products with the same interest rate at inception; in the case of CEL products, all such products constitute a single generation) are measured by discounting potential future earnings from at-risk outstandings for that generation.

At-risk outstandings are estimated on the basis of a historical analysis of customer behaviour, and are equivalent to:

- for the loan phase: statistically probable loans outstanding and actual loans outstanding;
- for the savings phase: the difference between statistically probable outstandings and minimum expected outstandings, with minimum expected outstandings being deemed equivalent to unconditional term deposits.

Earnings for future periods from the savings phase are estimated as the difference between the investment rate and the fixed savings interest rate on at-risk savings outstanding for the period in question. Earnings for future periods from the loan phase are estimated as the difference between the refinancing rate and the fixed loan interest rate on at-risk loans outstanding for the period in question.

The investment rate for savings and the refinancing rate for loans are derived from the swap yield curve and from the spreads expected on financial instruments of similar type and maturity. Spreads are determined on the basis of actual spreads on fixed-rate home loans in the case of the loan phase and products offered to individual clients in the case of the savings phase. In order to reflect the uncertainty of future interest rate trends, and the impact of such trends on customer behaviour models and on at-risk outstandings, the obligations are estimated using the Monte-Carlo method.

Where the sum of the Group's estimated future obligations with respect to the savings and loan phases of any generation of contracts indicates a potentially unfavourable situation for the Group, a provision is recognised (with no offset between generations) in the balance sheet in "Provisions for contingencies and charges". Movements in this provision are recognised as interest income in the profit and loss account.

### **1.f.5 IMPAIRMENT OF FINANCIAL ASSETS MEASURED AT AMORTISED COST AND DEBT INSTRUMENTS MEASURED AT FAIR VALUE THROUGH SHAREHOLDERS' EQUITY**

The impairment model for credit risk is based on expected losses.

This model applies to loans and debt instruments measured at amortised cost or at fair value through equity, to loan commitments and financial guarantee contracts that are not recognised at fair value, as well as to lease receivables, trade receivables and contract assets.

#### **General model**

The Group identifies three "stages" that each correspond to a specific status with regards to the evolution of counterparty credit risk since the initial recognition of the asset.

- 12-month expected credit losses ("stage 1"): if at the reporting date, the credit risk of the financial instrument has not increased significantly since its initial recognition, this instrument is impaired at an amount equal to 12-month expected credit losses (resulting from the risk of default within the next 12 months);
- Lifetime expected credit losses for non-impaired assets ("stage 2"): the loss allowance is measured at an amount equal to the lifetime expected credit losses if the credit risk of the financial instrument has increased significantly since initial recognition, but the financial asset is not considered credit-impaired or doubtful;
- Lifetime expected credit losses for credit-impaired or doubtful financial assets ("stage 3"): the loss allowance is also measured for an amount equal to the lifetime expected credit losses.

This general model is applied to all instruments within the scope of IFRS 9 impairment, except for purchased or originated credit-impaired financial assets and instruments for which a simplified model is used (see below).

The IFRS 9 expected credit loss approach is symmetrical, i.e. if lifetime expected credit losses have been recognised in a previous reporting period, and if it is assessed in the current reporting period that there is no longer any significant increase in credit risk since initial recognition, the loss allowance reverts to a 12-months expected credit loss.

As regards interest income, under "stages" 1 and 2, it is calculated on the gross carrying amount. Under "stage 3", interest income is calculated on the amortised cost (i.e. the gross carrying amount adjusted for the loss allowance).

#### **Definition of default**

The definition of default is aligned with the Basel regulatory default definition, with a rebuttable presumption that the default occurs no later than 90 days past due. This definition takes into account the EBA guidelines of 28 September 2016, notably those regarding the thresholds applicable for the counting of past-due and probation periods.

The definition of default is used consistently for assessing the increase in credit risk and measuring expected credit losses.

## Credit-impaired or doubtful financial assets

### Definition

A financial asset is considered credit-impaired or doubtful and classified in “stage 3” when one or more events that have a detrimental impact on the estimated future cash flows of that financial asset have occurred.

At an individual level, objective evidence that a financial asset is credit-impaired includes observable data regarding the following events: the existence of accounts that are more than 90 days past due; knowledge or indications that the borrower is experiencing significant financial difficulties, such that a risk can be considered to have arisen regardless of whether the borrower has missed any payments; concessions with respect to the credit terms granted to the borrower that the lender would not have considered had the borrower not been in financial difficulty (see section *Restructuring of financial assets for financial difficulties*).

### Specific cases of purchased or originated credit-impaired assets

In some cases, financial assets are credit-impaired at initial recognition.

For these assets, no loss allowance is recorded on initial recognition. The effective interest rate is calculated taking into account the lifetime expected credit losses in the initial estimated cash flows. Any change in lifetime expected credit losses since initial recognition, positive or negative, is recognised as a loss allowance adjustment in profit or loss.

### Simplified model

The simplified approach consists in accounting for a loss allowance corresponding to lifetime expected credit losses since initial recognition, and at each reporting date.

The Group applies this model to trade receivables with a maturity shorter than 12 months.

### Significant increase in credit risk

A significant increase in credit risk may be assessed on an individual basis or on a collective basis (by grouping financial instruments according to common credit risk characteristics), taking into account all reasonable and supportable information and comparing the risk of default of the financial instrument at the reporting date with the risk of default of the financial instrument at the date of initial recognition.

Assessment of deterioration is based on the comparison of the probabilities of default derived from the ratings on the date of initial recognition with those existing at the reporting date.

There is also, according to the standard, a rebuttable presumption that the credit risk of an instrument has significantly increased since initial recognition when the contractual payments are more than 30 days past due.

In the consumer credit specialist business, a significant increase in credit risk is also considered when a past due event has occurred within the last 12 months, even if it has since been regularised. From 2024, this specificity no longer applies to most exposures in the Eurozone.

The approaches applied to assess the significant increase in credit risk are detailed in note 2.g *Cost of risk*.

### Measurement of expected credit losses

Expected credit losses are defined as an estimate of credit losses (i.e. the present value of all cash shortfalls) weighted by the probability of occurrence of these losses over the expected life of the financial instruments. They are measured on an individual basis, for all exposures.

In practice, for exposures classified in stage 1 and stage 2, expected credit losses are measured as the product of the Probability of Default (“PD”), Loss Given Default (“LGD”) and Exposure At Default (“EAD”), discounted at the effective interest rate of the exposure (EIR). They result from the risk of default within the next 12 months (stage 1), or from the risk of default over the maturity of the facility (stage 2). In the consumer credit specialist business, because of the specificity of credit exposures, the methodology used is based on the probability of transition to term forfeiture, and on discounted loss rates after term forfeiture. These parameters are measured on a statistical basis for homogeneous populations. From 2024, this specificity no longer applies to most exposures in the Eurozone.

For exposures classified in stage 3, expected credit losses are measured as the value, discounted at the effective interest rate, of all cash shortfalls over the life of the financial instrument. Cash shortfalls represent the difference between the cash flows that are due in accordance with the contract, and the cash flows that are expected to be received. Where appropriate, the estimate of expected cash flows takes into account a cash flow scenario arising from the sale of the defaulted loans or groups of loans. Proceeds from the sale are recorded net of costs to sell.

The methodology developed is based on existing concepts and methods (in particular the Basel framework) on exposures for which capital requirement for credit risk is measured according to the Internal Ratings-Based Approach (IRBA) methodology. This method is also applied to portfolios for which capital requirement for credit risk is measured according to the standardised approach. Besides, the Basel framework has been adjusted in order to be compliant with IFRS 9 requirements, in particular the use of forward-looking information.

### *Maturity*

All contractual terms of the financial instrument are taken into account, including prepayment, extension and similar options. In the rare cases where the expected life of the financial instrument cannot be estimated reliably, the residual contractual term is used. The standard specifies that the maximum period to consider when measuring expected credit losses is the maximum contractual period. However, for revolving credit cards and overdrafts, in accordance with the exception provided by IFRS 9 for these products, the maturity considered for measuring expected credit losses is the period over which the entity is exposed to credit risk, which may extend beyond the contractual maturity (notice period). For revolving credits and overdrafts to non-retail counterparties, the contractual maturity can be used, for example if the next review date is the contractual maturity as they are individually managed.

### *Probabilities of Default (PD)*

Probability of Default is an estimate of the likelihood of default over a given time horizon.

The determination of the PD is based on the Group's internal rating system, which is described in chapter 5 of the Universal registration document (section 5.4 *Credit risk – Credit risk management policy*). This section describes how Environmental, social and governance (ESG) risks are taken into account in credit and rating policies, notably with the introduction of a new tool: the *ESG Assessment*.

The measurement of expected credit losses requires the estimation of both 1-year probabilities of default and lifetime probabilities of default.

1-year PDs are derived from long term average regulatory "through the cycle" PDs to reflect the current situation and macroeconomic scenarios ("Point in Time" or "PIT").

Lifetime PDs are determined based on the rating migration matrices reflecting the expected changes in the rating of the exposure until maturity, and the associated probabilities of default.

### *Loss Given Default (LGD)*

Loss Given Default is the difference between contractual cash flows and expected cash-flows, discounted using the effective interest rate (or an approximation thereof) at the default date. LGD is expressed as a percentage of the Exposure At Default (EAD).

The estimate of expected cash flows takes into account cash flows resulting from the sale of collateral held or other credit enhancements if they are part of the contractual terms and are not accounted for separately by the entity (for example, a mortgage associated with a residential loan), net of the costs of obtaining and selling the collateral.

For guaranteed loans, the guarantee is considered as integral to the loan agreement if it is embedded in the contractual clauses of the loan, or if it was granted concomitantly to the loan, and if the expected reimbursement amount can be attached to a loan in particular (i.e. absence of pooling effect by means of a tranching mechanism, or the existence of a global cap for a whole portfolio). In such case, the guarantee is taken into account when measuring the expected credit losses. Otherwise, it is accounted for as a separate reimbursement asset.

The LGD used for IFRS 9 purposes is derived from the Basel LGD parameters. It is adjusted for downturn and conservatism margins (in particular regulatory margins), except for margins for model uncertainties. For corporate clients, this LGD is determined considering macroeconomic scenarios.

### *Exposure At Default (EAD)*

Exposure At Default (EAD) of an instrument is the anticipated outstanding amount owed by the obligor at the time of default. It is determined by the expected payment profile taking into account, depending on the product type: the contractual repayment schedule, expected early repayments and expected future drawings for revolving facilities.

### *Forward-looking information*

The amount of expected credit losses is measured on the basis of probability-weighted scenarios, in view of past events, current conditions and reasonable and supportable economic forecasts. From 31 December 2024, forward looking information specifically takes into account risks related to climate change transition, in particular through the use of long-term scenarios.

The approaches applied to take into account forward-looking information when measuring expected credit losses are detailed in note 2.g *Cost of risk*.

### **Write-offs**

A write-off consists in reducing the gross carrying amount of a financial asset when there are no longer reasonable expectations of recovering that financial asset in its entirety or a portion thereof, or when it has been fully or partially forgiven. The write-off is recorded when all other means available to the Bank for recovering the receivables or guarantees have failed, and also generally depends on the context specific to each jurisdiction.

If the amount of loss on write-off is greater than the accumulated loss allowance, the difference is recognised as an additional impairment loss in "Cost of risk". For any recovery once the financial asset (or part thereof) is no longer recognised on the balance sheet, the amount received is recorded as a gain in "Cost of risk".

### **Recoveries through the repossession of the collateral**

When a loan is secured by a financial or a non-financial asset serving as a guarantee and the counterparty is in default, the Group may decide to exercise the guarantee and, depending on the jurisdiction, it may then become owner of the asset. In such a situation, the loan is written-off against the asset received as collateral.

Once ownership of the asset is effective, it is recognised at fair value and classified according to the intent of use.

### **Restructuring of financial assets for financial difficulties**

A restructuring due to the borrower's financial difficulties is defined as a change in the terms and conditions of the initial transaction that the Group is considering only for economic or legal reasons related to the borrower's financial difficulties.

For restructurings not resulting in derecognition of the financial asset, the restructured asset's gross carrying amount is reduced to the discounted amount, using the original effective interest rate of the asset, of the new expected future flows. The change in the gross carrying amount of the asset is recorded in the income statement in "Cost of risk".

The existence of a significant increase in credit risk for the financial instrument is then assessed by comparing the risk of default after the restructuring (under the revised contractual terms) and the risk of default at the initial recognition date (under the original contractual terms). In order to demonstrate that the criteria for recognising lifetime expected credit losses are no longer met, good payment behaviour will have to be observed over a certain period of time.

When the restructuring consists of a partial or total exchange against other substantially different assets (for example, the exchange of a debt instrument against an equity instrument), it results in the extinction of the original asset and the recognition of the assets remitted in exchange, measured at their fair value at the date of exchange. The difference in value is recorded in the income statement in "Cost of risk".

Modifications to financial assets that are not due to a borrower's financial difficulties, or granted in the context of a moratorium (i.e. commercial renegotiations) are generally analysed as the early repayment of the former loan, which

is then derecognised, followed by the set-up of a new loan at market conditions. If there is no significant repayment penalty, they consist in resetting the interest rate of the loan at market conditions, with the client being in a position to change lender and not encountering any financial difficulties.

### **Probation periods**

The Group applies observation periods to assess the possible return to a better stage. Accordingly, a 3-month probation period is observed for the transition from stage 3 to stage 2 which is extended to 12 months in the event of restructuring due to financial difficulties.

For the transition from stage 2 to stage 1, a probation period of two years is observed for loans that have been restructured due to financial difficulties.

### **1.f.6 COST OF RISK**

Cost of risk includes the following items of profit or loss:

- impairment gains and losses resulting from the accounting of loss allowances for 12-month expected credit losses and lifetime expected credit losses ("stage 1" and "stage 2") relating to debt instruments measured at amortised cost or at fair value through shareholders' equity, loan commitments and financial guarantee contracts that are not recognised at fair value as well as lease receivables, contract assets and trade receivables;
- impairment gains and losses resulting from the accounting of loss allowances relating to financial assets (including those at fair value through profit or loss) for which there is objective evidence of impairment ("stage 3"), write-offs on irrecoverable loans and amounts recovered on loans written-off.

It also includes expenses relating to fraud and to disputes inherent to the financing activity.

### **1.f.7 FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH PROFIT OR LOSS**

#### **Trading portfolio and other financial assets measured at fair value through profit or loss**

The trading portfolio includes instruments held for trading (trading transactions), including derivatives.

Other financial assets measured at fair value through profit or loss include debt instruments that do not meet the "collect" or "collect and sale" business model criterion or that do not meet the cash flow criterion, as well as equity instruments for which the fair value through shareholders' equity option has not been retained. Finally financial assets may be designated as at fair value through profit or loss if this enables the entity to eliminate or significantly reduce a mismatch in the measurement and accounting treatment of assets and liabilities that would otherwise arise if they were to be classified in separate categories.

All those financial instruments are measured at fair value at initial recognition, with transaction costs directly posted in profit or loss. At the reporting date, they are measured at fair value, with changes presented in "Net gain/loss on financial instruments at fair value through profit or loss". Income, dividends, and realised gains and losses on disposal related to held-for-trading transactions are accounted for in the same profit or loss account.

## Financial liabilities designated as at fair value through profit or loss

Financial liabilities are recognised under option in this category in the two following situations:

- for hybrid financial instruments containing one or more embedded derivatives which otherwise would have been separated and accounted for separately. An embedded derivative is such that its economic characteristics and risks are not closely related to those of the host contract;
- when using the option enables the entity to eliminate or significantly reduce a mismatch in the measurement and accounting treatment of assets and liabilities that would otherwise arise if they were to be classified in separate categories.

Changes in fair value due to the own credit risk are recognised under a specific heading of shareholders' equity.

### 1.f.8 FINANCIAL LIABILITIES AND EQUITY INSTRUMENTS

A financial instrument issued or its various components are classified as a financial liability or equity instrument, in accordance with the economic substance of the legal contract.

Financial instruments issued by the Group are qualified as debt instruments if the entity in the Group issuing the instruments has a contractual obligation to deliver cash or another financial asset to the holder of the instrument. The same applies if the Group is required to exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavourable to the Group, or to deliver a variable number of the Group's own equity instruments.

Equity instruments result from contracts evidencing a residual interest in an entity's assets after deducting all of its liabilities.

#### Debt securities and subordinated debt

Debt securities and subordinated debt are measured at amortised cost unless they are recognised at fair value through profit or loss.

Debt securities are initially recognised at the issue value including transaction costs and are subsequently measured at amortised cost using the effective interest method.

Issued bonds redeemable or convertible into own equity may contain a debt component and an equity component, determined upon initial recognition of the transaction. In this case, they will be qualified as compound financial instruments.

In this respect, the Group has elected to record contingent convertible bonds issued, without maturity, when convertible into a variable number of own shares on the occurrence of a predetermined trigger event (e.g. a decrease in the solvency ratio below a threshold), as compound instruments, to the extent that the coupons on these bonds are paid discretionarily.

#### Equity instruments

The term "own equity instruments" refers to shares issued by the parent company (BNP Paribas SA) and by its fully consolidated subsidiaries. External costs that are directly attributable to an issue of new shares are deducted from equity net of all related taxes.

Own equity instruments held by the Group, also known as treasury shares, are deducted from consolidated shareholders' equity irrespective of the purpose for which they are held. Gains and losses arising on such instruments are eliminated from the consolidated profit and loss account.

When the Group acquires equity instruments issued by subsidiaries under the exclusive control of BNP Paribas, the difference between the acquisition price and the share of net assets acquired is recorded in retained earnings attributable to BNP Paribas shareholders. Similarly, the liability corresponding to put options granted to minority shareholders in such subsidiaries, and changes in the value of that liability, are offset against minority interests, with

any surplus offset against retained earnings attributable to BNP Paribas shareholders. Until these options have been exercised, the portion of net income attributable to minority interests is allocated to minority interests in the profit and loss account. A decrease in the Group's interest in a fully consolidated subsidiary is recognised in the Group's accounts as a change in shareholders' equity.

Financial instruments issued by the Group and classified as equity instruments (notably the undated super subordinated notes) are presented in the balance sheet in "Capital and retained earnings".

Distributions from a financial instrument classified as an equity instrument are recognised directly as a deduction from equity. Similarly, the transaction costs of an instrument classified as equity are recognised as a deduction from shareholders' equity.

Own equity instrument derivatives are treated as follows, depending on the method of settlement:

- as equity instruments if they are settled by physical delivery of a fixed number of own equity instruments for a fixed amount of cash or other financial asset. Such instruments are not revalued;
- as derivatives if they are settled in cash or by choice by physical delivery of the shares or in cash. Changes in value of such instruments are taken to the profit and loss account.

If the contract includes an obligation, whether contingent or not, for the Bank to repurchase its own shares, the bank recognises the debt at its present value with an offsetting entry in shareholders' equity.

### 1.f.9 HEDGE ACCOUNTING

The Group retained the option provided by the standard to maintain the hedge accounting requirements of IAS 39 until the future standard on macro-hedging is entered into force. Furthermore, IFRS 9 does not explicitly address the fair value hedge of the interest rate risk on a portfolio of financial assets or liabilities. The provisions in IAS 39 for these portfolio hedges, as adopted by the European Union, continue to apply.

Derivatives contracted as part of a hedging relationship are designated according to the purpose of the hedge.

Fair value hedges are particularly used to hedge interest rate risk on fixed-rate assets and liabilities, both for identified financial instruments (securities, debt issues, loans, borrowings) and for portfolios of financial instruments (in particular, demand deposits and fixed-rate loans).

Cash flow hedges are particularly used to hedge interest rate risk on floating-rate assets and liabilities, including rollovers, and foreign exchange risks on highly probable forecast foreign currency revenues.

At the inception of the hedge, the Group prepares formal documentation which details the hedging relationship, identifying the instrument, or portion of the instrument, or portion of risk that is being hedged, the hedging strategy and the type of risk hedged, the hedging instrument, and the methods used to assess the effectiveness of the hedging relationship.

On inception and at least quarterly, the Group assesses, in consistency with the original documentation, the actual (retrospective) and expected (prospective) effectiveness of the hedging relationship. Retrospective effectiveness tests are designed to assess whether the ratio of actual changes in the fair value or cash flows of the hedging instrument to those in the hedged item is within a range of 80% to 125%. Prospective effectiveness tests are designed to ensure that expected changes in the fair value or cash flows of the derivative over the residual life of the hedge adequately offset those of the hedged item. For highly probable forecast transactions, effectiveness is assessed largely on the basis of historical data for similar transactions.

Under IAS 39 as adopted by the European Union, which excludes certain provisions on portfolio hedging, interest rate risk hedging relationships based on portfolios of assets or liabilities qualify for fair value hedge accounting as follows:

- the risk designated as being hedged is the interest rate risk associated with the interbank rate component of interest rates on commercial banking transactions (loans to customers, savings accounts and demand deposits);
- the instruments designated as being hedged correspond, for each maturity band, to a portion of the interest rate gap associated with the hedged underlying;
- the hedging instruments used consist exclusively of "plain vanilla" swaps;

- prospective hedge effectiveness is established by the fact that all derivatives must, on inception, have the effect of reducing interest rate risk in the portfolio of hedged underlying. Retrospectively, a hedge will be disqualified from hedge accounting once a shortfall arises in the underlying specifically associated with that hedge for each maturity band (due to prepayment of loans or withdrawals of deposits).

The accounting treatment of derivatives and hedged items depends on the hedging strategy.

In a fair value hedging relationship, the derivative instrument is remeasured at fair value in the balance sheet, with changes in fair value recognised in profit or loss in “Net gain/loss on financial instruments at fair value through profit or loss”, symmetrically with the remeasurement of the hedged item to reflect the hedged risk. In the balance sheet, the fair value remeasurement of the hedged component is recognised in accordance with the classification of the hedged item in the case of a hedge of identified assets and liabilities, or under “Remeasurement adjustment on interest rate risk hedged portfolios” in the case of a portfolio hedging relationship.

If a hedging relationship ceases or no longer fulfils the effectiveness criteria, the hedging instrument is transferred to the trading book and accounted for using the treatment applied to this category. In the case of identified fixed-income instruments, the remeasurement adjustment recognised in the balance sheet is amortised at the effective interest rate over the remaining life of the instrument. In the case of interest rate risk hedged fixed-income portfolios, the adjustment is amortised on a straight-line basis over the remainder of the original term of the hedge. If the hedged item no longer appears in the balance sheet, in particular due to prepayments, the adjustment is taken to the profit and loss account immediately.

In a cash flow hedging relationship, the derivative is measured at fair value in the balance sheet, with changes in fair value taken to shareholders’ equity on a separate line, “Changes in fair value recognised directly in equity”. The amounts taken to shareholders’ equity over the life of the hedge are transferred to the profit and loss account under “Net interest income” as and when the cash flows from the hedged item impact profit or loss. The hedged items continue to be accounted for using the treatment specific to the category to which they belong.

If the hedging relationship ceases or no longer fulfils the effectiveness criteria, the cumulative amounts recognised in shareholders’ equity as a result of the remeasurement of the hedging instrument remain in equity until the hedged transaction itself impacts profit or loss, or until it becomes clear that the transaction will not occur, at which point they are transferred to the profit and loss account.

If the hedged item ceases to exist, the cumulative amounts recognised in shareholders’ equity are immediately taken to the profit and loss account.

Whatever the hedging strategy used, any ineffective portion of the hedge is recognised in the profit and loss account under “Net gain/loss on financial instruments at fair value through profit or loss”.

Hedges of net foreign currency investments in subsidiaries and branches are accounted for in the same way as cash flow hedges. Hedging instruments may be foreign exchange derivatives or any other non-derivative financial instrument.

## 1.f.10 DETERMINATION OF FAIR VALUE

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants in the principal market or most advantageous market, at the measurement date.

The Group determines the fair value of financial instruments either by using prices obtained directly from external data or by using valuation techniques. These valuation techniques are primarily market and income approaches encompassing generally accepted models (e.g. discounted cash flows, Black-Scholes model, and interpolation techniques). They maximise the use of observable inputs and minimise the use of unobservable inputs. They are calibrated to reflect current market conditions and valuation adjustments are applied as appropriate, when some factors such as model, liquidity and credit risks are not captured by the models or their underlying inputs but are nevertheless considered by market participants when setting the exit price.

The unit of measurement is the individual financial asset or financial liability but a portfolio-based measurement can be elected, subject to certain conditions. Accordingly, the Group retains this portfolio-based measurement exception to determine the fair value when some group of financial assets and financial liabilities and other contracts within the

scope of the standard relating to financial instruments with substantially similar and offsetting market risks or credit risks is managed on the basis of a net exposure, in accordance with the documented risk management strategy.

Assets and liabilities measured or disclosed at fair value are categorised into the three following levels of the fair value hierarchy:

- Level 1: fair values are determined using directly quoted prices in active markets for identical assets and liabilities. Characteristics of an active market include the existence of a sufficient frequency and volume of activity and of readily available prices;
- Level 2: fair values are determined based on valuation techniques for which significant inputs are observable market data, either directly or indirectly. These techniques are regularly calibrated and the inputs are corroborated with information from active markets;
- Level 3: fair values are determined using valuation techniques for which significant inputs are unobservable or cannot be corroborated by market-based observations, due for instance to illiquidity of the instrument and significant model risk. An unobservable input is a parameter for which there are no market data available and that is therefore derived from proprietary assumptions about what other market participants would consider when assessing fair value. The assessment of whether a product is illiquid or subject to significant model risks is a matter of judgment.

The level in the fair value hierarchy within which the asset or liability is categorised in its entirety is based upon the lowest level input that is significant to the entire fair value measurement.

For financial instruments disclosed in Level 3 of the fair value hierarchy, and marginally some instruments disclosed in Level 2, a difference between the transaction price and the fair value may arise at initial recognition. This “Day One Profit” is deferred and released to the profit and loss account over the period during which the valuation parameters are expected to remain non-observable. When parameters that were originally non-observable become observable, or when the valuation can be substantiated in comparison with recent similar transactions in an active market, the unrecognised portion of the day one profit is released to the profit and loss account.

## **1.f.11 DERECOGNITION OF FINANCIAL ASSETS AND FINANCIAL LIABILITIES**

### **Derecognition of financial assets**

The Group derecognises all or part of a financial asset when the contractual rights to the cash flows of the asset expire, or when the Group transfers the asset – either on the basis of a transfer of the contractual rights to its cash flows, or by retaining the contractual rights to receive the cash flows of the asset while assuming an obligation to pay the cash flows of the asset under an eligible pass-through arrangement – as well as substantially all the risks and rewards of the asset.

Where the Group has transferred the cash flows of a financial asset but has neither transferred nor retained substantially all the risks and rewards of ownership of the financial asset and has not in practice retained control of the financial asset, the Group derecognises the financial asset and then records separately, if necessary, an asset or liability representing the rights and obligations created or held as part of the transfer of the asset. If the Group has retained control of the financial asset, it maintains it on its balance sheet to the extent of its continuing involvement in that asset.

Upon the derecognition of a financial asset in its entirety, a gain or loss on disposal is recognised in the profit and loss account for an amount equal to the difference between the carrying amount of the asset and the value of the consideration received, adjusted where appropriate for any unrealised gain or loss previously recognised directly in equity.

If all these conditions are not met, the Group retains the asset in its balance sheet and recognises a liability for the obligations arising on the transfer of the asset.

### **Derecognition of financial liabilities**

The Group derecognises all or part of a financial liability when the liability is extinguished, i.e. when the obligation specified in the contract is extinguished, cancelled or expired. A financial liability may also be derecognised in the event of a substantial change in its contractual terms or if exchanged with the lender for an instrument with substantially different contractual terms.

## Repurchase agreements and securities lending/borrowing

Securities temporarily sold under repurchase agreements continue to be recognised in the Group's balance sheet in the category of securities to which they belong. The corresponding liability is recognised at amortised cost under the appropriate "Financial liabilities at amortised cost" category on the balance sheet, except in the case of repurchase agreements contracted for trading purposes, for which the corresponding liability is recognised in "Financial liabilities at fair value through profit or loss".

Securities temporarily acquired under reverse repurchase agreements are not recognised in the Group's balance sheet. The corresponding receivable is recognised at amortised cost under the appropriate "Financial assets at amortised cost" category in the balance sheet, except in the case of reverse repurchase agreements contracted for trading purposes, for which the corresponding receivable is recognised in "Financial assets at fair value through profit or loss".

Securities lending transactions do not result in derecognition of the lent securities, and securities borrowing transactions do not result in recognition of the borrowed securities on the balance sheet. In cases where the borrowed securities are subsequently sold by the Group, the obligation to deliver the borrowed securities on maturity is recognised on the balance sheet under "Financial liabilities at fair value through profit or loss".

### 1.f.12 OFFSETTING FINANCIAL ASSETS AND FINANCIAL LIABILITIES

A financial asset and a financial liability are offset and the net amount presented in the balance sheet if, and only if, the Group has a legally enforceable right to set off the recognised amounts, and intends either to settle on a net basis, or to realise the asset and settle the liability simultaneously.

Repurchase agreements and derivatives that meet the two criteria set out in the accounting standard are offset in the balance sheet.

## 1.g INSURANCE ACTIVITIES

### 1.g.1 INVESTMENTS RELATED TO INSURANCE ACTIVITIES

IFRS 9 is applied in the same way as to other Group entities (see note 1.f).

Investments of insurance activities include investment property which are measured at fair value as underlying assets of direct participating contracts.

### 1.g.2 INSURANCE CONTRACTS

The Group applies IFRS 17 to insurance contracts issued, reinsurance contracts issued and held, and discretionary investment contracts issued (if the entity also issues insurance contracts).

The main insurance contracts issued by the Group correspond to:

- contracts covering risks related to persons or property: creditor protection insurance contracts, protection contracts, contracts covering other non-life risks (automobile, multi-risk housing, *etc.*). These contracts are measured according to the general measurement model (Building Block Approach - BBA) or the premium allocation approach (PAA) for contracts eligible for this method;
- life or savings contracts: euro-denominated and multiple saving contracts (invested in a general fund and in unit-linked accounts) with or without insurance risk including a discretionary participating component and unit-linked contracts with a floor guarantee in the event of death. These contracts are measured using the variable fee approach (VFA).

A reinsurance contract (or treaty) is an insurance contract by which an insurer (ceding company or cedent) transfers part of its risks to a reinsurer. The Group acts as reinsurer by accepting risks related to persons or property from

external insurers and as ceding company by transferring such risks to external reinsurers. Contracts may be proportional or non-proportional depending on the nature of the risks and the appetite for the risk accepted or retained. They are measured either according to the general model or according to the premium allocation approach since the standard prohibits the use of the variable fee approach for reinsurance contracts.

Investment contracts without discretionary participating features and without insurance risk backed by unit-linked underlying assets are measured at fair value through profit or loss in accordance with IFRS 9.

The methods for measuring and recognising these various contracts according to the measurement model adopted are set out below.

These contracts are described in note 5.d *Assets and liabilities related to insurance contracts*.

- *Prior separation of components covered by other standards and not closely related*

When insurance or investment contracts with discretionary participation include components, which would fall within the scope of another standard if they were separate contracts, an analysis must be carried out to determine whether these components should be accounted for separately. Thus:

- an embedded derivative is separated from the host insurance contract and accounted for under IFRS 9 when its economic characteristics and risks are not closely related to those of the host contract;
- an investment component corresponds to the amount that the insurer is required to repay to the insured in all cases whether the insured event occurs or not. It is separated from the host insurance contract and accounted for under IFRS 9 when it is distinct from the host insurance contract and when equivalent contracts could be sold separately in the same market or legal area. It is not separated if it is closely linked to the host contract. Changes in a non-distinct investment component (and in particular related payments) are not recognised in the profit and loss account;
- a promise to transfer to the policyholder distinct goods or services other than the services of the insurance contract is separated from the host insurance contract and accounted for under IFRS 15.

- *Insurance contracts*

An insurance contract is a contract under which a party, the issuer, assumes a significant insurance risk for another party, the policyholder, by agreeing to indemnify the policyholder if a specified uncertain future event, the insured event, is detrimental to the policyholder.

An insurance risk is significant if, and only if, an insured event can cause the insurer to pay significant additional amounts in any scenario, excluding scenarios that are devoid of commercial substance. A contract transfers a significant insurance risk only if there is a scenario with a commercial substance in which there is a possibility that the issuer will incur a loss based on the present value.

The insurance risks covered by Group entities are:

- either risks related to physical person: mortality (guarantees in the event of death), longevity (guarantees in the event of survival, e.g. life annuities), morbidity (guarantees in the event of disability), permanent disability, health (medical coverage), unemployment of physical persons; or
- risks of damage to property and civil liability.

Life or savings contracts issued by Group entities are qualified as insurance contracts if they include a risk in the event of survival (pension contracts with compulsory annuities) or a risk in the event of death (unit-linked contracts with a floor guarantee in the event of death and savings contracts with a guarantee of an additional amount payable in the event of death). In the absence of such risks, these contracts are investment contracts with or without discretionary participating features.

- *Investment contracts with discretionary participating features*

Investment contracts do not expose the insurer to significant insurance risk. They are within the scope of IFRS 17 if they are issued by entities that also issue insurance contracts.

Discretionary participation is defined as the contractual right to receive, in addition to an amount that is not at the issuer's discretion, additional amounts that are likely to represent a significant portion of the total benefits provided under the contract. Benefits, for which the timing or amount is contractually left to the issuer's discretion and that are contractually based on the returns arising from a defined set of contracts or type of contract or on the realised and/or unrealised investment returns from a defined set of assets held by the issuer, or the result of the entity or fund issuing the contract.

For the subsidiaries controlled by the Group, savings contracts invested in a euro-denominated fund and multiple saving contracts invested in unit-linked assets and in a euro-denominated fund are considered as investment

contracts with discretionary participating features, measured using the variable fee approach.

## Accounting and measurement

### - *Aggregation of contracts*

Insurance contracts are accounted and measured by groups of contracts within portfolios of contracts covering similar risks and managed together. Groups of contracts are determined according to their expected profitability at inception: onerous contracts, profitable contracts with a low risk of becoming onerous, and others. A group of contracts may contain only contracts issued no more than one year apart (corresponding to an annual “cohort”), except where the optional exemption provided for in the European regulation applies, which is the case for life-savings contracts, as described below.

For creditor protection insurance, personal protection insurance and other non-life risks, the Group uses the following discriminatory criteria when constructing portfolios of homogeneous contracts: legal entity, nature of the risks and partner, distributor. The reinsurance contracts accepted shall follow the same principles.

For life and savings contracts, the Group uses the following criteria for portfolios of homogeneous contracts: legal entity, product and underlying assets. Savings and retirement contracts are classified in separate portfolios (including in the period prior to the transition) due to the existence of a risk of longevity in retirement contracts.

For reinsurance contracts held, the Group uses the following criteria: legal entity, underlying item and counterparty. A portfolio can sometimes correspond to a single reinsurance treaty.

### - *Recognition and derecognition*

A group of insurance contracts (or reinsurance contracts issued) is recognised from the earliest of the following dates: the beginning of the period of coverage of the group of contracts, the date on which the first payment of a policyholder in the group becomes due (or, in the absence of such a date, when the first payment is received) and, in the case of a group of onerous contracts, the date on which the group becomes onerous.

A group of reinsurance contracts held is recognised from the beginning of the period of coverage of the group of reinsurance contracts held or, if the reinsurance was contracted in anticipation of the coverage of an underlying group of onerous insurance contracts, on the first recognition of that onerous group.

On initial recognition of portfolios of insurance contracts acquired as part of a business combination or a separate transfer, groups of contracts acquired are treated as if the contracts had been issued at the date of the transaction. The consideration received or paid in exchange for the contracts is treated as an approximation of the premiums received for the purpose of calculating the contractual service margin at initial recognition from this amount. In the case of a business combination within the scope of IFRS 3, the consideration received or paid is the fair value of the contracts at that date. For business combinations that have occurred since the first application of IFRS 17, this fair value has been determined by projecting the liabilities valuation under the Solvency 2 prudential approach which constitutes a market benchmark. For onerous contracts, the excess of the fulfilment cash flows over the consideration paid or received is recognised in the goodwill (or the profit resulting from an acquisition on advantageous terms) if it is a business combination and in a separate transfer, in the profit and loss account. For profitable contracts, the difference is recorded as a contractual service margin. In addition, an asset for cash flows related to acquisition costs must be recognised, for its fair value, for the acquisition costs related to the renewal of existing insurance contracts or for the acquisition costs already paid by the acquired company for future contracts.

An insurance contract shall be derecognised when the obligation it covers is extinguished, by payment or maturity, or if the terms of the contract are amended in such a way that the accounting treatment of the contract would have been substantially different if those amendments had originally existed. The derecognition of a contract entails the adjustment of the fulfilment cash flows, the contractual services margin and the coverage units of the group in which it was included.

- **General measurement model (Building Block Approach – BBA)**

- *Characteristics*

The general model for the measurement of insurance contracts is the best estimate of the future cash flows to be paid or received necessary to meet contractual obligations. This estimate should reflect the different possible scenarios and the effect of the options and guarantees included in the contracts within the limit or “contract boundary”. The determination of this contract boundary requires an analysis of the rights and obligations arising from the contract and, in particular, of the insurer’s ability to change its price to reflect the risks. This leads, for example, to the exclusion of tacit renewals if the tariff can be amended or to the inclusion of such renewals if not.

Cash flows are discounted to reflect the time value of money. They correspond only to cash flows attributable to insurance contracts either directly or through allocation methods: premiums, acquisition and contract management costs, claims and benefits, indirect costs, taxes and depreciation of tangible and intangible assets.

The cash flows estimate is supplemented by an explicit risk adjustment to cover the uncertainty of cash flows for non-financial risk. These two elements constitute the fulfilment cash flows of the contracts. A contractual service margin is added representing the expected gain or loss on future services related to a group of contracts.

If the contractual service margin is positive, it is shown on the balance sheet within the insurance contract’s measurement and amortised as the services are rendered; if negative, it is recognised immediately in the income statement. The original loss (or “loss component”) is monitored extra-accounting to allow for the subsequent recognition of the insurance service revenue.

Acquisition costs are deducted from the contractual service margin of the group of contracts to which they relate and amortised over the coverage period of contracts.

At each reporting date, the carrying amount of a group of insurance contracts is the sum of the liabilities for the remaining coverage which include the fulfilment cash flows related to future services (best estimate and risk adjustment) and the contractual service margin remaining at that date, and of the liabilities for incurred claims which include the best estimate of the cash flows and the risk adjustment, excluding any contractual service margin. The assumptions used to estimate future cash flows and the non-financial risks adjustment are updated, as well as the discount rate, to reflect the situation at the reporting date.

The contractual service margin is adjusted for changes in the estimates of non-financial assumptions related to future services, capitalised at the inception rate, and then amortised in the income statement for services rendered over the period in the insurance service revenue. In the case of contracts which become onerous, after consumption of the contractual service margin, the loss is recognised in the reporting period. In the case of onerous contracts that become profitable again as a result of favourable changes in assumptions, the contractual service margin is only reconstituted after offsetting the loss component.

The release of expected fulfilment flows (cash flow estimates and risk adjustments) for the period, except for the amount allocated to the loss component, is recorded in insurance service revenue. The change in estimates related to past service (cash flow estimates and risk adjustments) is recognised in “Insurance service expenses”.

The Group includes the change in the adjustment for non-financial risk related to past and current services in its entirety in the “Insurance service result”.

The Group records in equity the effect of the change in the discount rate on the cash flows. The expense of unwinding the discount is recorded in “Insurance financial income or expenses” based on the initial rate (the inception rate for the liability for remaining coverage, and the rate at claims occurrence date for the liability for incurred claims). The difference between the value of liabilities discounted at the rate fixed at initial date and the value of those same liabilities estimated using current discount rate is recognised in equity. The effect on liabilities of changes in financial variables, in particular the indexation of benefits under the contract, is also recognised in equity.

The discount rate is based on the risk-free rate adjusted for the illiquidity of the liabilities. For protection, the liquidity premium is currently valued at zero due to the short settlement period for claims on the main risks covered and non-transferability to policyholders of the illiquidity of liabilities.

The risk adjustment is determined using the quantile method.

The coverage unit used to amortise the contractual service margin is derived from the risk premium earned during the period.

### *-Contracts concerned*

Contracts covering personal or property risks (creditor protection insurance, protection and other non-life risks) are measured according to the general model when the contract boundary, expected changes in cash flows and the time value effect over the coverage period do not make them eligible under the simplified approach, or by operational choice (a single measurement model for short and long contracts).

- **Measurement model for contracts with direct participation features (Variable Fee Approach – VFA)**

### *- Characteristics*

Direct participating contracts are insurance or investment contracts for which:

- the contractual terms specify that the policyholder is entitled to a share of a clearly defined portfolio of underlying assets;
- the insurer expects to pay the policyholder a sum corresponding to a substantial portion of the return on the fair value of the underlying assets;
- the insurer expects that any change in the amounts to be paid to the policyholder is, in a substantial proportion, attributable to the change in the fair value of the underlying assets.

Compliance with these conditions is monitored on the underwriting date and is not reviewed later.

For these contracts, for which the insurer has to pay the policyholder an amount corresponding to the fair value of clearly identified underlying assets, less a variable compensation, a specific model (called the “Variable Fee Approach”) has been developed by adapting the general model.

At each reporting date, liabilities related to these contracts are adjusted for the return earned and changes in the fair value of the underlying assets: the policyholders’ share is recorded in the contract fulfilment cash flows against insurance financial income or expense and the insurer’s share corresponding to the variable fee is included in the contractual service margin.

The contractual service margin is also adjusted for the effect of changes in cash flows that do not vary according to the returns on the underlying assets and that relate to future services: estimation of cash flows, risk adjustment, changes in the time value effect of money and changes in the financial risks that do not result from the underlying assets (for example, the effect of financial guarantees).

Changes in the fulfilment cash flows that do not change in connection with the yields of underlying assets and that relate to past service events are recognised in the profit and loss account. This is the case for management fees and attributable costs.

Acquisition cash flows are deducted from the contractual service margin of the group of contracts to which they relate and amortised over the coverage period of the contracts, as in the general model.

Due to the mechanism for allocating the change in the value of the underlying assets between the policyholders and the insurer, the result of these contracts is in principle mainly represented by the release of the fulfilment cash flows and the amortisation of the contractual service margin. When the underlying assets fully support the liabilities and are measured at fair value through profit or loss, the financial result under these contracts should be nil. The Group has chosen the option of reclassifying in shareholders’ equity the change in the liabilities related to the underlying assets that are not measured at fair value through profit or loss.

Life and savings contracts meeting the above definition of direct participating contracts are valued using the variable fee approach. When these contracts include a surrender value, it meets the definition of a non-distinct investment component and changes in that investment component (including related payments) are therefore not recognised in the income statement.

The Group has chosen to apply the option introduced by the European regulation not to divide the portfolios of participating contracts based on intergenerational mutualisation by annual cohort. As a result of this choice, the assessment of the onerousness is made on the basis of the portfolio and not on the basis of the annual cohorts.

The contract boundary includes future payments as long as the applicable pricing is not modifiable (e.g. acquisition or management loadings), as well as the annuity phase in service when contracts provide for a mandatory annuity or optional (in this case, the option is probabilistic).

The discount rate is based on the risk-free rate, extrapolated over the duration exceeding the period for which observable data are available and adjusted by a liquidity premium on the basis of the underlying assets to reflect the illiquidity of the liabilities.

The risk adjustment is determined by combining the cost of capital method without considering the risk of mass lapses, including future payments and considering only attributable costs, and the quantile method for the free payment component.

The coverage unit used to amortise the contractual service margin is the change in savings due to policyholders (determined at present value), adjusted to take into account the impact of the real return on financial or property assets compared with the actuarial neutral risk projection.

#### *-Contracts concerned*

Insurance contracts and investment contracts with discretionary participating features backed by pools of underlying assets commonly referred to as “general funds” or “policyholders’ funds” that correspond to pools of assets isolated analytically, contractually or in regulation, as well as unit-linked contracts with a floor guarantee in case of death and multiple saving contracts backed by assets such as a “general fund” are measured using the variable fee approach.

The option provided for in the European regulation related to the annual cohort exemption is applied to insurance contracts and investment contracts with discretionary participation features where the policyholders’ profit-sharing is mutualised between the different generations of policyholders: these are euro-denominated or multiple saving contracts including a euro-denominated fund, in France, Italy and Luxembourg.

The liabilities for incurred claims are measured using the variable fee approach if they are sensitive to changes in the value of the underlying assets and the general model if they are not.

- **Simplified measurement model (Premium Allocation Approach – PAA)**

#### *- Characteristics*

Short-term contracts (less than one year) may be measured using a simplified approach known as the premium allocation approach, also applicable to longer-term contracts if it leads to results similar to those of the general model in terms of liability for the remaining coverage.

Contracts with a long contract boundary, where significant changes in cash flows are expected over the coverage period, or where the time value effect over the coverage period is material, are not eligible for the simplified approach.

For profitable contracts, the liability for the remaining coverage corresponds to the deferral of premiums collected according to a profile representing the remaining coverage at the reporting date. For onerous contracts, deferred premiums are supplemented by an estimate of the expected loss over the coverage period. Liabilities for incurred claims are valued according to the general model. In this case, the method used to determine the risk adjustment is the same as for the general model.

The Group has chosen the option of deferring acquisition costs over the coverage duration and therefore presenting them as a deduction of the deferred premiums, except where the coverage of the contracts coincides with the calendar year or the deferred acquisition costs are not material.

Liabilities for incurred claims are discounted if the expected settlement of claims takes place after one year from the date of occurrence. The discount expense is recognised in insurance financial income or expenses as in the general model. In this case, the option to classify the effect of changes in the discount rate into equity is also applicable. The Group has retained this option for the liabilities for incurred claims.

At each reporting date, the adjustment of liabilities for remaining coverage and for incurred claims is recognised in profit or loss.

#### - *Contracts concerned*

Creditor protection insurance, personal protection insurance and other non-life insurance contracts, are measured using the simplified approach if the conditions are met (unless the general model is chosen for operational reasons).

- **Treatment of the reinsurance**

#### - *Reinsurance contracts issued (reinsurance accepted)*

Reinsurance accepted shall be treated as insurance contracts issued, either in the general model or in the simplified model, depending on the duration of the reinsurance contracts.

The Group accepts mainly risks corresponding to those it covers as a direct insurer under proportional or non-proportional treaties.

#### - *Reinsurance contracts held (reinsurance ceded)*

The reinsurance ceded is also treated according to the general or simplified model, but the equivalent of the contractual service margin represents the expected gain or loss on the reinsurance and may be positive or negative. If a reinsurance contract offsets the losses of an underlying group of onerous contracts, the reinsurance gain is recognised immediately in profit or loss. This “loss recovery component” is used to record amounts that are subsequently presented in net income.

In addition, contract execution flows include the reinsurer’s risk of non-performance.

The Group cedes on reinsurance the risks it wishes to hedge (for example, non-proportional treaties covering peak risk, the risk of accumulation or exceeding the desired retention) or under the risk-sharing framework of proportional treaties for technical or commercial reasons.

The reinsurance contracts held are measured by the Group using the simplified approach or the general model.

### **Presentation in the balance sheet and in the profit and loss**

The Group has chosen to present the investments of insurance activities and their results separately from the financial assets and liabilities of banking activities.

Financial income or expenses from issued insurance contracts are presented separately between the profit and loss account and shareholders’ equity for portfolios for which this breakdown has been deemed relevant, as allowed by the standard. For the Protection contracts liabilities measured under the general model and for the liabilities for incurred claims arising from contracts measured under the simplified model, this choice for portfolios classification was made by taking into account both the effects in the profit and loss account of the undiscounting of the liabilities and the accounting treatment of the assets backing them. For contracts measured using the variable fee approach, this choice was made to offset any accounting mismatch that may exist in the profit and loss account between the effect of changes in fair value from insurance or investment liabilities and that from the underlying assets when these are not recognised at fair value through profit or loss.

Insurance contracts may be distributed and managed by non-insurance entities of the Group that are remunerated as such by commissions paid by insurance entities. The measurement model for insurance contracts requires projecting in the contract fulfilment cash flows the acquisition and management costs that will be paid in the future and presenting in the profit and loss account, the release of the estimated costs for the period on the one hand, and on the other, the actual costs. For commissions between consolidated companies in the Group, the Group restates the internal margin on the balance sheet and in the profit and loss account (in the breakdown of insurance liabilities and the related results between cash flows and contractual service margin) by presenting as insurance service expenses the portion of the general expenses (excluding internal margins) of the banking entities that can be attributed to the insurance activity. The internal distributors’ margins are determined based on standardised management data for each of the related networks.

### **Effect of accounting estimates in interim financial statements**

The Group has elected under IFRS 17 to record in its annual financial statements the effects of changes in accounting estimates relating to insurance contracts issued or held, without taking into account estimates previously made in its interim financial statements.

## 1.h PROPERTY, PLANT, EQUIPMENT AND INTANGIBLE ASSETS

Property, plant and equipment and intangible assets shown in the consolidated balance sheet are composed of assets used in operations and investment property. Rights-of-use related to leased assets (see note 1.i.2) are presented by the lessee within fixed assets in the same category as similar assets held.

Assets used in operations are those used in the provision of services or for administrative purposes, and include non-property assets leased by the Group as lessor under operating leases.

Investment property comprises property assets held to generate rental income and capital gains.

Investment property is recognised at cost, except for those held as underlying assets under participating direct contracts (as amended by IAS 40), which are measured at fair value through profit or loss and presented in the balance sheet under "Investments related to insurance activities" (see note 1.g.1).

Property, plant and equipment and intangible assets are initially recognised at purchase price plus directly attributable costs, together with borrowing costs where a long period of construction or adaptation is required before the asset can be brought into service. By way of exception, property occupied by the holder entity that is an underlying component of direct participating contracts is measured at fair value (by amendment to IAS 16).

Software developed internally by the BNP Paribas Group that fulfils the criteria for capitalisation is capitalised at direct development cost, which includes external costs and the labour costs of employees directly attributable to the project.

Subsequent to initial recognition, property, plant and equipment and intangible assets are measured at cost less accumulated depreciation or amortisation and any impairment losses.

The depreciable amount of property, plant and equipment and intangible assets is calculated after deducting the residual value of the asset. Only assets leased by the Group as the lessor under operating leases are presumed to have a residual value, as the useful life of property, plant and equipment and intangible assets used in operations is generally the same as their economic life.

Property, plant and equipment and intangible assets are depreciated or amortised using the straight-line method over the useful life of the asset. Depreciation and amortisation expense is recognised in the profit and loss account under "Depreciation, amortisation and impairment of property, plant and equipment and intangible assets".

Where an asset consists of a number of components which may require replacement at regular intervals, or which have different uses or generate economic benefits at different rates, each component is recognised separately and depreciated using a method appropriate to that component. The BNP Paribas Group has adopted the component-based approach for property used in operations and for investment property.

The depreciation periods used for office property are as follows: 80 years or 60 years for the shell (for prime and other property respectively); 30 years for facades; 20 years for general and technical installations; and 10 years for fixtures and fittings.

Software is amortised, depending on its type, over periods of no more than 8 years in the case of infrastructure developments and 3 years or 5 years in the case of software developed primarily for the purpose of providing services to customers.

Software maintenance costs are expensed as incurred. However, expenditure that is regarded as upgrading the software or extending its useful life is included in the initial acquisition or production cost.

Depreciable property, plant and equipment and intangible assets are tested for impairment if there is an indication of potential impairment at the balance sheet date. Non-depreciable assets are tested for impairment at least annually, using the same method as for goodwill allocated to cash-generating units.

If there is an indication of impairment, the new recoverable amount of the asset is compared with the carrying amount. If the asset is found to be impaired, an impairment loss is recognised in the profit and loss account. This loss is reversed in the event of a change in the estimated recoverable amount or if there is no longer an indication of impairment. Impairment losses are taken to the profit and loss account in "Depreciation, amortisation and impairment of property, plant and equipment and intangible assets".

Gains and losses on disposals of property, plant and equipment and intangible assets used in operations are recognised in the profit and loss account in "Net gain on non-current assets".

Gains and losses on disposals of investment property are recognised in the profit and loss account in "Income from other activities" or "Expense on other activities".

## 1.i LEASES

Group companies may either be the lessee or the lessor in a lease agreement.

### 1.i.1 GROUP COMPANY AS LESSOR

Leases contracted by the Group as lessor are categorised as either finance leases or operating leases.

- **Finance leases**

In a finance lease, the lessor transfers substantially all the risks and rewards of ownership of an asset to the lessee. It is treated as a loan made to the lessee to finance the purchase of the asset.

The present value of the lease payments, plus any residual value, is recognised as a receivable. The net income earned from the lease by the lessor is equal to the amount of interest on the loan and is taken to the profit and loss account under "Interest income". The lease payments are spread over the lease term and are allocated to reduction of the principal and to interest such that the net income reflects a constant rate of return on the net investment outstanding in the lease. The rate of interest used is the rate implicit in the lease.

Impairments of lease receivables are determined using the same principles as applied to financial assets measured at amortised cost.

- **Operating leases**

An operating lease is a contract under which most of the risks and rewards of ownership of the leased asset are not transferred to the lessee.

The leased asset is initially recognised by the lessor as a tangible asset for its acquisition price less residual value and subsequently depreciated on a straight-line basis over its useful life. The asset depreciation charge and lease payments are recognised in profit and loss over the lease term respectively in "Income from other activities" and "Expense on other activities" line items.

Vehicles leased by the Group and classified under operating leases are assets with an average lease term of between one and five years. The cost of acquiring these assets includes their purchase price, as well as any directly attributable costs necessary to make the vehicle available to the lessee customers. Residual value is a statistical model estimate of the resale value of the asset and is re-estimated monthly, taking into account, in particular, historical data on the sale of vehicles in the second-hand market and the specific context of each geographical area. In the event of a change in the amount of the residual value of the asset relative to its estimated value, a forward-looking adjustment to the depreciation plan is made vehicle by vehicle.

### 1.i.2 GROUP COMPANY AS LESSEE

Lease contracts concluded by the Group, with the exception of contracts whose term is shorter than or equal to 12-months and low-value contracts, are recognised in the balance-sheet in the form of a right-of-use on the leased asset presented under fixed assets, along with the recognition of a financial liability for the rent and other payments to be made over the leasing period. The right of use assets is amortised on a straight-line basis and the financial liabilities are amortised on an actuarial basis over the lease period. Dismantling costs corresponding to specific and significant fittings and fixtures are included in the initial right-of-use estimation, in counterparty of a provision liability.

The key hypotheses used by the Group for the measurement of rights of use and lease liabilities are the following:

- the lease term corresponds to the non-cancellable period of the contract, together with periods covered by an extension option if the Group is reasonably certain to exercise this option. In France, the standard commercial lease contract is the so-called "three, six, nine" contract for which the maximum period of use is nine years, with a first non-cancellable period of three years followed by two optional extension periods of

three years each; hence, depending on the assessment, the selected lease term can be of three, six or nine years, depending on the reasonably foreseeable economic duration of the contracts. When investments like fittings or fixtures are performed under the contract, the lease term is aligned with their useful lives. For tacitly renewable contracts, with or without an enforceable period, related right of use and lease liabilities are recognised based on an estimate of the reasonably foreseeable economic life of the contracts, minimal occupation period included;

- the discount rate used to measure the right of use and the lease liability is assessed for each contract as the interest rate implicit in the lease, if that rate can be readily determined, or more generally based on the incremental borrowing rate of the lessee at the date of signature. The incremental borrowing rate is determined considering the average term (duration) of the contract;
- when the contract is modified, a new assessment of the lease liability is made taking into account the new residual term of the contract, and therefore a new assessment of the right of use and the lease liability is established.

## 1.j ASSETS HELD FOR SALE AND DISCONTINUED OPERATIONS

Where the Group decides to sell assets or a group of assets and liabilities and it is highly probable that the sale will occur within 12 months, these assets are shown separately in the balance sheet, on the line “Assets held for sale”. Any liabilities associated with these assets are also shown separately in the balance sheet, on the line “Liabilities associated with assets held for sale”. When the Group is committed to a sale plan involving loss of control of a subsidiary and the sale is highly probable within 12 months, all the assets and liabilities of that subsidiary are classified as held for sale.

Once classified in this category, assets and the group of assets and liabilities are measured at the lower of carrying amount or fair value less costs to sell.

Such assets are no longer depreciated. If an asset or group of assets and liabilities becomes impaired, an impairment loss is recognised in the profit and loss account. Impairment losses may be reversed.

Where a group of assets and liabilities held for sale represents a cash generating unit, it is categorised as a “discontinued operation”. Discontinued operations include operations that are held for sale, operations that have been shut down, and subsidiaries acquired exclusively with a view to resell.

In this case, gains and losses related to discontinued operations are shown separately in the profit and loss account, on the line “Net income from discontinued activities”. This line includes after tax profits or losses of discontinued operations, after tax gain or loss arising from remeasurement at fair value less costs to sell, and after tax gain or loss on disposal of the operation.

## 1.k EMPLOYEE BENEFITS

Employee benefits are classified into four categories:

- short-term benefits, such as salary, annual leave, incentive plans, profit-sharing and additional payments;
- long-term benefits, including compensated absences, long-service awards, and other types of cash-based deferred compensation;
- termination benefits;
- post-employment benefits, including top-up banking industry pensions and retirement bonuses in France and pension plans in other countries, some of which are operated through pension funds.

- **Short-term benefits**

The Group recognises an expense when it has used services rendered by employees in exchange for employee benefits.

- **Long-term benefits**

These are benefits, other than short-term benefits, post-employment benefits and termination benefits. This relates, in particular, to compensation deferred for more than 12 months and not linked to the BNP Paribas share price, which is accrued in the financial statements for the period in which this compensation is earned.

The actuarial techniques used are similar to those used for defined-benefit post-employment benefits, except that the revaluation items are recognised in the profit and loss account and not in equity.

- **Termination benefits**

Termination benefits are employee benefits payable in exchange for the termination of an employee's contract as a result of either a decision by the Group to terminate a contract of employment before the legal retirement age, or a decision by an employee to accept voluntary redundancy in exchange for these benefits. Termination benefits due more than 12- months after the balance sheet date are discounted.

- **Post-employment benefits**

In accordance with IFRS, the BNP Paribas Group draws a distinction between defined-contribution plans and defined-benefit plans.

Defined-contribution plans do not give rise to an obligation for the Group and do not require a provision. The amount of the employer's contributions payable during the period is recognised as an expense.

Only defined-benefit schemes give rise to an obligation for the Group. This obligation must be measured and recognised as a liability by means of a provision.

The classification of plans into these two categories is based on the economic substance of the plan, which is reviewed to determine whether the Group has a legal or constructive obligation to pay the agreed benefits to employees.

Post-employment benefit obligations under defined-benefit plans are measured using actuarial techniques that take demographic and financial assumptions into account.

The net liability recognised with respect to post-employment benefit plans is the difference between the present value of the defined-benefit obligation and the fair value of plan assets (if any).

The present value of the defined-benefit obligation is measured on the basis of the actuarial assumptions applied by the Group, using the projected unit credit method. This method takes into account various parameters, specific to each country or Group entity, such as demographic assumptions, the probability that employees will leave before retirement age, salary inflation, a discount rate, and the general inflation rate.

When the value of the plan assets exceeds the amount of the obligation, an asset is recognised if it represents a future economic benefit for the Group in the form of a reduction in future contributions or a future partial refund of amounts paid into the plan.

The annual expense recognised in the profit and loss account under "Salaries and employee benefits", with respect to defined-benefit plans includes the current service cost (the rights vested by each employee during the period in return for service rendered), the net interests linked to the effect of discounting the net defined-benefit liability (asset), the past service cost arising from plan amendments or curtailments, and the effect of any plan settlements.

Remeasurements of the net defined-benefit liability (asset) are recognised in shareholders' equity and are never reclassified to profit or loss. They include actuarial gains and losses, the return on plan assets and any change in the effect of the asset ceiling (excluding amounts included in net interest on the defined-benefit liability or asset).

## 1.1 SHARE-BASED PAYMENTS

Share-based payment transactions are payments based on shares issued by the Group, whether the transaction is settled in the form of equity or cash of which the amount is based on trends in the value of BNP Paribas shares.

- **Stock option and share award plans**

The expense related to stock option and share award plans is recognised over the vesting period, if the benefit is conditional upon the grantee's continued presence at the vesting date.

Stock options and share award expenses are recorded under salary and employee benefits expenses, with a corresponding adjustment to shareholders' equity. They are calculated on the basis of the overall plan value, determined at the date of grant by the Board of directors.

In the absence of any market for these instruments, financial valuation models are used that take into account any performance conditions related to the BNP Paribas share price. The total expense of a plan is determined by multiplying the unit value per option or share awarded by the estimated number of options or shares awarded vested at the end of the vesting period, taking into account the conditions regarding the grantee's continued employment.

The only assumptions revised during the vesting period, and hence resulting in a remeasurement of the expense, are those relating to the probability that employees will leave the Group and those relating to performance conditions that are not linked to the price value of BNP Paribas shares.

- **Share price-linked cash-settled deferred compensation plans**

The expense related to these plans is recognised in the year during which the employee rendered the corresponding services.

If the payment of share-based variable compensation is explicitly subject to an enforceable condition consisting in the employee's continued presence at the vesting date, the services are presumed to have been rendered during the vesting period and the corresponding compensation expense is recognised on a *pro rata* basis over that period. The expense is recognised under salary and employee benefits expenses with a corresponding liability in the balance sheet. It is revised to take into account any non-fulfilment of the continued presence or performance conditions and the change in BNP Paribas share price.

If there is no continued presence enforceable condition, the expense is not deferred, but recognised immediately with a corresponding liability in the balance sheet. This is then revised on each reporting date until settlement to take into account any performance conditions and the change in the BNP Paribas share price.

## 1.m PROVISIONS RECORDED UNDER LIABILITIES

Provisions recorded under liabilities (other than those relating to financial instruments, employee benefits and insurance contracts) mainly relate to restructuring, claims and litigation, fines and penalties.

A provision is recognised when it is probable that an outflow of resources embodying economic benefits will be required to settle an obligation arising from a past event, and a reliable estimate can be made of the amount of the obligation. The amount of such obligations is discounted, where the impact of discounting is material, in order to determine the amount of the provision.

## 1.n CURRENT AND DEFERRED TAX

The current income tax charge is determined on the basis of the tax laws and tax rates in force in each country in which the Group operates during the period in which the income is generated.

Deferred taxes are recognised when temporary differences arise between the carrying amount of an asset or liability in the balance sheet and its tax base.

Deferred tax liabilities are recognised for all taxable temporary differences other than:

- taxable temporary differences on initial recognition of goodwill;
- taxable temporary differences on investments in enterprises under the exclusive or joint control of the Group, where the Group is able to control the timing of the reversal of the temporary difference and it is probable that the temporary difference will not reverse in the foreseeable future.

Deferred tax assets are recognised for all deductible temporary differences and unused carryforwards of tax losses only to the extent that it is probable that the entity in question will generate future taxable profits against which these temporary differences and tax losses can be offset.

Deferred tax assets and liabilities are measured using the liability method, using the tax rate which is expected to apply to the period when the asset is realised or the liability is settled, based on tax rates and tax laws that have been or will have been enacted by the balance sheet date of that period. They are not discounted.

Deferred tax assets and liabilities are offset when they arise within the same tax group, they fall under the jurisdiction of a single tax authority, and there is a legal right to offset.

As regards the assessment of uncertainty over income tax treatments, the Group adopts the following approach:

- the Group assesses whether it is probable that a taxation authority will accept an uncertain tax treatment;
- any uncertainty shall be reflected when determining the taxable profit (loss) by considering either the most likely amount (having the higher probability of occurrence), or the expected value (sum of the probability-weighted amounts).

Current and deferred taxes are recognised as tax income or expenses in the profit and loss account, except for those relating to a transaction or an event directly recognised in shareholders' equity, which are also recognised in shareholders' equity. This concerns in particular the tax effect of coupons paid on financial instruments issued by the Group and qualified as equity instruments, such as undated super subordinated notes.

When tax credits on revenues from receivables and securities are used to settle corporate income tax payable for the period, the tax credits are recognised on the same line as the income to which they relate. The corresponding tax expense continues to be carried in the profit and loss account under "Corporate income tax".

In accordance with the provisions of IAS 12, the Group applies the mandatory and temporary exception not to recognise deferred taxes associated with the additional tax resulting from the minimum income tax applied by international groups.

## 1.o CASH FLOW STATEMENT

The cash and cash equivalents balance is composed of the net balance of cash accounts and accounts with central banks, and the net balance of interbank demand loans and deposits.

Changes in cash and cash equivalents related to operating activities reflect cash flows generated by the Group's operations, including those relating to financial investments of insurance activities and negotiable certificates of deposit.

Changes in cash and cash equivalents related to investing activities reflect cash flows resulting from acquisitions and disposals of subsidiaries, associates or joint ventures included in the consolidated Group, as well as acquisitions and disposals of property, plant and equipment excluding investment property and property held under operating leases.

Changes in cash and cash equivalents related to financing activities reflect the cash inflows and outflows resulting from transactions with shareholders, cash flows related to bonds and subordinated debt, and debt securities (excluding negotiable certificates of deposit).

## **1.p USE OF ESTIMATES IN THE PREPARATION OF THE FINANCIAL STATEMENTS**

Preparation of the financial statements requires managers of core businesses and corporate functions to make assumptions and estimates that are reflected in the measurement of income and expense in the profit and loss account and of assets and liabilities in the balance sheet, and in the disclosure of information in the notes to the financial statements. This requires the managers in question to exercise their judgement and to make use of information available at the date of the preparation of the financial statements when making their estimates. The actual future results from operations where managers have made use of estimates may in reality differ significantly from those estimates, mainly according to market conditions. This may have a material effect on the financial statements.

This applies in particular to:

- the analysis of the cash flow criterion for specific financial assets;
- the measurement of expected credit losses. This applies in particular to the assessment of significant increase in credit risk, the models and assumptions used to measure expected credit losses, including those relating to climate risks, the determination of the different economic scenarios and their weighting;
- the analysis of renegotiated loans, in order to assess whether they should be maintained on the balance-sheet or derecognised;
- the assessment of an active market, and the use of internally developed models for the measurement of the fair value of financial instruments not quoted in an active market classified in "Financial assets at fair value through equity", or in "Financial instruments at fair value through profit or loss", whether as assets or liabilities, and more generally calculations of the fair value of financial instruments subject to a fair value disclosure requirement;
- the assumptions applied to assess the sensitivity to each type of market risk of the market value of financial instruments and the sensitivity of these valuations to the main unobservable inputs as disclosed in the notes to the financial statements;
- the appropriateness of the designation of certain derivative instruments such as cash flow hedges, and the measurement of hedge effectiveness;
- impairment tests performed on intangible assets;
- the estimation of residual assets values under simple lease agreements. These values are used as a basis for the determination of depreciation as well as any impairment, notably in relation to the effect of environmental considerations on the evaluation of future prices of second-hand vehicles;
- the deferred tax assets;
- the measurement of insurance liabilities and assets, and investment contracts with discretionary participation, by groups of contracts, on the basis of discounted and probability weighted future fulfilment cash flows, based on assumptions that can be derived from market or entity-specific data, and the recognition of the results of such contracts on the basis of the services rendered over the coverage period;
- the measurement of uncertainty over income tax treatments and other provisions for contingencies and charges. In particular, while investigations and litigations are ongoing, it is difficult to foresee their outcome and potential impact. Provision estimation is established by taking into account all available information at the date of the preparation of the financial statements, in particular the nature of the dispute, the underlying facts, the ongoing legal proceedings and court decisions, including those related to similar cases. The Group may also use the opinion of experts and independent legal advisers to exercise its judgement.

## 2. NOTES TO THE PROFIT AND LOSS ACCOUNT FOR THE FIRST HALF OF 2025

### 2.a NET INTEREST INCOME

The BNP Paribas Group includes in “Interest income” and “Interest expense” all income and expense calculated using the effective interest method (interest, fees and transaction costs) from financial instruments measured at amortised cost and financial instruments measured at fair value through equity.

These items also include the interest income and expense of non-trading financial instruments the characteristics of which do not allow for recognition at amortised cost or at fair value through equity, as well as of financial instruments that the Group has designated as at fair value through profit or loss. The change in fair value on financial instruments at fair value through profit or loss (excluding accrued interest) is recognised under “Net gain on financial instruments at fair value through profit or loss”.

Interest income and expense on derivatives accounted for as fair value hedges are included with the revenues generated by the hedged item. Similarly, interest income and expense arising from derivatives used to hedge transactions designated as at fair value through profit or loss is allocated to the same accounts as the interest income and expense relating to the underlying transactions.

In the case of a negative interest rates related to loans and receivables or deposits from customers and credit institutions, they are accounted for in interest expense or interest income respectively.

In millions of euros	First half 2025			First half 2024		
	Income	Expense	Net	Income	Expense	Net
<b>Financial instruments at amortised cost</b>	<b>31,911</b>	<b>(22,495)</b>	<b>9,416</b>	<b>35,462</b>	<b>(27,070)</b>	<b>8,392</b>
Deposits, loans and borrowings	27,056	(16,889)	10,167	30,472	(20,076)	10,396
Repurchase agreements	327	(587)	(260)	418	(673)	(255)
Finance leases	1,626	(54)	1,572	1,485	(52)	1,433
Debt securities	2,902		2,902	3,087		3,087
Issued debt securities and subordinated debt		(4,965)	(4,965)		(6,269)	(6,269)
<b>Financial instruments at fair value through equity</b>	<b>1,585</b>	<b>-</b>	<b>1,585</b>	<b>1,384</b>	<b>-</b>	<b>1,384</b>
<b>Financial instruments at fair value through profit or loss (Trading securities excluded)</b>	<b>60</b>	<b>(958)</b>	<b>(898)</b>	<b>126</b>	<b>(587)</b>	<b>(461)</b>
<b>Cash flow hedge instruments</b>	<b>1,627</b>	<b>(711)</b>	<b>916</b>	<b>1,918</b>	<b>(1,027)</b>	<b>891</b>
<b>Interest rate portfolio hedge instruments</b>	<b>1,390</b>	<b>(2,491)</b>	<b>(1,101)</b>	<b>3,511</b>	<b>(4,107)</b>	<b>(596)</b>
<b>Lease liabilities</b>	<b>-</b>	<b>(39)</b>	<b>(39)</b>		<b>(38)</b>	<b>(38)</b>
<b>Total interest income/(expense)</b>	<b>36,573</b>	<b>(26,694)</b>	<b>9,879</b>	<b>42,401</b>	<b>(32,829)</b>	<b>9,572</b>

The first half of 2024 includes an expense of EUR 36 million due to the adjustment of economic hedges consecutive to the changes in the TLTRO (Targeted Longer-Term Refinancing Operations) terms and conditions.

Net interest income includes funding costs related to Global Markets, whose revenues are mainly accounted for in “Net gain on financial instruments at fair value through profit or loss” (see note 2.c), as well as to Arval, whose income from operating leases is presented in note 2.e.

The evolution of the net interest income is therefore to be analysed in conjunction with those observed for these lines.

Interest income on individually impaired loans amounted to EUR 178 million for the first half 2025, compared with EUR 154 million for the first half 2024.

## 2.b COMMISSION INCOME AND EXPENSE

In millions of euros	First half 2025			First half 2024		
	Income	Expense	Net	Income	Expense	Net
Customer transactions	2,677	(747)	1,930	2,643	(703)	1,940
Securities and derivatives transactions	1,409	(1,120)	289	1,364	(967)	397
Financing and guarantee commitments	616	(71)	545	633	(52)	581
Asset management and other services	2,872	(170)	2,702	2,688	(169)	2,519
Others	621	(738)	(117)	763	(789)	(26)
<b>Commission income and expense</b>	<b>8,195</b>	<b>(2,846)</b>	<b>5,349</b>	<b>8,091</b>	<b>(2,680)</b>	<b>5,411</b>
- of which net commission income related to trust and similar activities through which the Group holds or invests assets on behalf of clients, trusts, pension and personal risk funds or other institutions	1,685	(162)	1,523	1,603	(166)	1,437
- of which commission income and expense on financial instruments not measured at fair value through profit or loss	1,669	(190)	1,479	1,687	(158)	1,529

## 2.c NET GAIN ON FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH PROFIT OR LOSS

Net gain on financial instruments measured at fair value through profit or loss includes all profit and loss items relating to financial instruments held for trading, financial instruments that the Group has designated as at fair value through profit or loss, non-trading equity instruments that the Group did not choose to measure at fair value through equity, as well as debt instruments whose cash flows are not solely repayments of principal and interest on the principal or whose business model is not to collect cash flows nor to collect cash flows and sell the assets.

These income items include dividends on these instruments and exclude interest income and expense from financial instruments designated as at fair value through profit or loss and instruments whose cash flows are not only repayments of principal and interest on the principal or whose business model is not to collect cash flows nor to collect cash flows and sell the assets, which are presented in "Net interest income" (see note 2.a).

In millions of euros	First half 2025	First half 2024
<b>Financial instruments held for trading</b>	<b>5,343</b>	<b>5,902</b>
Interest rate and credit instruments	626	(580)
Equity financial instruments	5,302	5,929
Foreign exchange financial instruments	823	2,807
Loans and repurchase agreements	(2,952)	(2,899)
Other financial instruments	1,544	645
<b>Financial instruments designated as at fair value through profit or loss</b>	<b>886</b>	<b>(279)</b>
<b>Other financial instruments at fair value through profit or loss</b>	<b>514</b>	<b>275</b>
<b>Impact of hedge accounting</b>	<b>54</b>	<b>129</b>
Fair value hedging derivatives	2,950	3,301
Hedged items in fair value hedge	(2,896)	(3,172)
<b>Net gain on financial instruments at fair value through profit or loss</b>	<b>6,797</b>	<b>6,027</b>

Gains and losses on financial instruments designated as at fair value through profit or loss are mainly related to instruments for which changes in value may be compensated by changes in the value of economic hedging derivative financial instruments held for trading.

Net gain on financial instruments held for trading during the first halves of 2025 and 2024 includes a non-material amount related to the ineffective portion of cash flow hedges.

Potential sources of ineffectiveness can be the differences between hedging instruments and hedged items, notably generated by mismatches in the terms of hedged and hedging instruments, such as the frequency and timing of interest rates resetting, the frequency of payments and the discounting factors, or when hedging derivatives have a non-zero fair value at the inception date of the hedging relationship. Credit valuation adjustments applied to hedging derivatives are also sources of ineffectiveness.

Cumulated changes in fair value related to discontinued cash flow hedge relationships, previously recognised in equity and included during the first half of 2025 in profit and loss accounts are not material, whether the hedged item ceased to exist or not.

## 2.d NET GAIN ON FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH EQUITY

In millions of euros	First half 2025	First half 2024
Net gain on debt instruments	92	138
Dividend income on equity instruments	59	64
<b>Net gain on financial instruments at fair value through equity</b>	<b>151</b>	<b>202</b>

Interest income from debt instruments is included in note 2.a *Net interest income*, and impairment losses related to potential issuer default are included in note 2.g *Cost of risk*.

## 2.e NET INCOME FROM OTHER ACTIVITIES

In millions of euros	First half 2025			First half 2024		
	Income	Expense	Net	Income	Expense	Net
Net income from investment property	32	(13)	19	26	(11)	15
Net income from assets held under operating leases	10,280	(8,450)	1,830	9,648	(7,693)	1,955
Net income from property development activities	172	(143)	29	156	(144)	12
Other net income	746	(489)	257	1,192	(892)	300
<b>Total net income from other activities</b>	<b>11,230</b>	<b>(9,095)</b>	<b>2,135</b>	<b>11,022</b>	<b>(8,740)</b>	<b>2,282</b>

## 2.f OPERATING EXPENSES

In millions of euros	First half 2025	First half 2024
Salary and employee benefit expense for banking activities	(9,305)	(8,937)
Other operating expenses for banking activities	(5,212)	(5,173)
<i>of which external services and other operating expenses</i>	(4,214)	(4,231)
<i>of which taxes and contributions</i>	(998)	(942)
Insurance activities non attributable costs (note 5.b)	(415)	(386)
Reclassification of expenses incurred by internal distributors attributable to insurance contracts	588	550
<b>Operating expenses</b>	<b>(14,344)</b>	<b>(13,946)</b>

Taxes and contributions, including those related to insurance activities, amounted to EUR 1,079 million for the first half of 2025 (compared with EUR 1,011 million for the first half of 2024).

Expenses directly attributable to insurance contracts are presented in “Net income from insurance activities”. These costs consist mainly of distribution commissions paid for the acquisition of the contracts and other costs necessary for handling the contracts. They are included in the fulfilment expenses within the “Insurance service result” (see note 5.a).

Expenses attributable to insurance contracts include the operating expenses incurred by the Group banking networks to distribute insurance contracts. Related costs are assessed on the basis of the commissions paid by the insurance entities to the internal distributors less their margin. These costs are excluded from “Operating expenses” to be included in the contracts fulfilment cash flows through the “Reclassification of expenses incurred by internal distributors attributable to insurance contracts”.

Operating costs not directly attributable to insurance contracts are included in “Operating expenses”.

Reconciliation by type and by function of insurance activities operating expenses is presented in note 5.b.

## 2.g COST OF RISK

The general model for impairment described in note 1.f.5 used by the Group relies on the following two steps:

- assessing whether there has been a significant increase in credit risk since initial recognition; and
- measuring impairment allowance as either 12-month expected credit losses or lifetime expected credit loss (i.e. loss expected at maturity).

Both steps rely on forward-looking information.

### Significant increase in credit risk

Credit risk is assumed to have significantly increased, and the asset is classified in stage 2, if the probability of default to maturity of the instrument has increased at least threefold since its origination. This relative variation criterion is supplemented by an absolute variation criterion of the default probability of 400 basis points. These criteria are in line with the recommendations issued by the European Banking Authority (EBA) and the European Central Bank (ECB).

Furthermore, for all portfolios (except for the consumer credit specialist business outside the Eurozone):

- the facility is assumed to be in stage 1 when its 1-year “Point in Time” probability of default (PiT PD), including forward-looking information, is below 0.3% at the reporting date, since changes in probability of default due to credit downgrades in this zone are not material, and therefore not considered “significant”;
- when the 1-year PiT PD is greater than 20% at the reporting date, given the Group’s credit issuance practices, the deterioration is considered significant, and the facility is classified in stage 2 (as long as the facility is not credit-impaired).

In the consumer credit specialist business, the existence of a payment incident during the last 12 months, potentially regularised, is considered to be an indication of significant increase in credit risk and the facility is therefore classified in stage 2. From 2024, this specificity no longer applies to most exposures in the Eurozone.

Credit risk is assumed to have increased significantly since initial recognition and the asset is classified in stage 2 in the event of late payment of more than 30 days or restructuring due to financial difficulties (as long as the facility is not credit-impaired). Since 31 December 2023, performing corporate clients placed under credit watch are systematically downgraded to stage 2.

In 2022, the internal ratings of the Russian counterparties (including the sovereign rating) were systematically downgraded to take into account the geopolitical situation of the country, thus leading to the transfer of their outstandings to stage 2. However, given the Group's limited level of exposure to this country, this deterioration had no significant effect on the cost of risk.

## Forward-Looking Information

The Group considers forward-looking information both when assessing significant increase in credit risk and when measuring Expected Credit Losses (ECL).

Regarding the measurement of expected credit losses, the Group has chosen to use 4 macroeconomic scenarios by geographic area covering a wide range of potential future economic conditions:

- a baseline scenario, consistent with the scenario used for budgeting and forecasting;
- a favourable scenario, capturing situations where the economy performs better than anticipated;
- an adverse scenario, corresponding to the scenario used for the Group's quarterly stress tests;
- a severe scenario corresponding to a shock of magnitude greater than that of the adverse scenario.

The link between the macroeconomic scenarios and the ECL measurement is mainly achieved through a modelling of the probabilities of default and deformation of migration matrices based on internal rating (or risk parameter). The probabilities of default determined according to these scenarios are used to measure expected credit losses in each of these scenarios.

The Group's setup is broken down by sector to take into account the heterogeneity of sectoral dynamics when assessing the probability of default for corporates.

Forward-looking information is also considered when determining the significant deterioration in credit risk. As a matter of fact, the probabilities of default used as the basis for this assessment include forward-looking multi-scenario information in the same way as for the calculation of the expected losses.

The weight to be attributed to the expected credit losses calculated in each of the scenarios is defined as follows:

- the weight of the baseline scenario is 50%.
- the weight of the three alternative scenarios is defined according to the position in the credit cycle. In this approach, the adverse scenario carries more weight in situations at the upper end of the cycle than those at the lower end of the cycle, in anticipation of a potential downturn in the economy.
- the weight of the favourable scenario is at least 10% and at most 40%.
- the total weight of adverse scenarios fluctuates symmetrically with the favourable also within a range of 10% to 40%; with a severe component representing 20% of this weight with a minimum weight of 5%.

When appropriate, the ECL measurement can take into account asset sale scenarios.

## Macroeconomic scenarios

The four macroeconomic scenarios are defined over a three-year projection horizon. They correspond to:

- a baseline scenario, which describes the most likely path of the economy over the projection horizon. This scenario is updated on a quarterly basis and is prepared by the Group Economic Research department in collaboration with various experts within the Group. Projections are designed for each key market of the Group (France, Italy, Belgium, the United States, and the eurozone) using key macroeconomic variables (Gross Domestic Product - GDP - and its components, unemployment rate, consumer prices, interest rates, foreign exchange rates, oil prices, real estate prices, etc.) which are key drivers for modelling risk parameters used in the stress test process;
- an adverse scenario, which describes the impact of the materialisation of some of the risks weighing on the baseline scenario, resulting in a much less favourable economic path than in the baseline scenario. The GDP shock is applied with varying magnitudes, but simultaneously, to the economies under consideration. Generally, these assumptions are broadly consistent with those proposed by the regulators. The calibration

of shocks on other variables (e.g. unemployment, consumer prices, interest rates, etc.) is based on models and expert judgment;

- a severely adverse scenario, which is an aggravated version of the adverse scenario;
- a favourable scenario, which reflects the impact of the materialisation of some of the upside risks for the economy, resulting in a more favourable economic path. The favourable shock on GDP is deducted from the structural adverse shock on GDP in such a way that the probabilities of the two shocks are equal on average over the cycle. Other variables (e.g. unemployment, inflation, interest rates, etc.) are defined in the same way as in the adverse scenario.

The link between the macroeconomic scenarios and the measurement of the ECL is complemented by an approach allowing to take into account anticipation aspects not captured by the models in the generic approach. This is particularly the case when unprecedented events in the historical chronicle taken into account to build the models occur or are anticipated, or when the nature or amplitude of change in macroeconomic parameter calls into question past correlations. Thus, the situation of high inflation and the level of interest rates recorded earlier were not observed in the reference history. In this context, the Group has developed an approach to take into account the future economic outlook when assessing the financial strength of counterparties. This approach involves projecting the impact of higher interest rates on customers' financial ratios, notably considering their level of indebtedness. Credit ratings and associated probabilities of default are revalued based on these simulated financial ratios. This approach is also used to anticipate the effect of lower prices of commercial properties. Starting in 2024, this approach is also used to complete the prospective assessment of the potential consequences of climate change (transition and physical risks) on the credit risk of corporate counterparties and mortgages. Since the end of 2024, physical risks are accounted for through a post-model adjustment.

### *Baseline scenario*

At the beginning of 2025, activity showed varying dynamics across the regions of the world. In the United States, GDP contracted marginally in the first quarter. By contrast, growth strengthened in the euro area. On average, global growth slightly weakened compared to the end of 2024, reflecting the effects of trade tensions and the associated uncertainty.

Looking ahead, moderate growth is expected in advanced economies. In the euro area, the gradual recovery in activity is expected to continue. GDP growth is projected to accelerate (from 0.8% in 2024 to 1.5% in 2027), supported by more favourable monetary and budgetary conditions. In the United States, a marked slowdown is anticipated in 2025 and 2026 (1% annual growth for both years), due to uncertainty and the inflationary effect of tariff increases, before a rebound expected in 2027.

Inflation is expected to converge towards 2% in the euro area as early as 2025 and remain at that level in the following years. In the United States, it is expected to remain higher in 2025 and 2026 (above 3%), before gradually declining thereafter. In this context, the ECB is projected to continue lowering its key policy rates in 2025, while the Federal Reserve is expected to adopt a more cautious stance, with rate cuts postponed until 2026.

Long-term sovereign bond yields are expected to stabilize gradually, at 2.50% for the German 10-year bond and 4.25% for the US 10-year bond.

Uncertainty surrounding this scenario remains significant, particularly due to trade tensions and inflation dynamics in the United States.

The graph below presents a comparison of Eurozone GDP projections used in the baseline scenario for the calculation of ECLs on 30 June 2025 and 31 December 2024.

- Macroeconomic variables, baseline scenario at 30 June 2025**

<i>(annual averages)</i>	2024	2025	2026	2027
<b>GDP growth rate</b>				
Eurozone	0.8%	1.0%	1.4%	1.5%

Belgium	2.93%	3.14%	3.10%	3.10%
United States	4.21%	4.42%	4.25%	4.25%

### *Adverse and severely adverse scenarios*

The adverse and severely adverse scenarios assume that some downside risks will materialise, resulting in much less favourable economic paths than in the baseline scenario.

The following main risks are identified:

- **Trade tensions.** Tensions related to trade have increased since the beginning of 2025, following the rise in US tariffs. A high degree of uncertainty surrounds the outcome of negotiations between the United States and its trading partners, as well as the potential implementation of retaliatory measures by other countries. More broadly, the intensification of trade tensions is likely to weigh on global activity through higher prices in some countries, weaker exports in others, and a heightened climate of uncertainty.
- **Geopolitical risks.** Geopolitical tensions can weigh on the global economy through various channels, such as shocks on commodity prices, financial markets, business confidence, supply chains, and trade. These developments are likely to lead simultaneously to higher inflation and a slowdown in activity, further complicating the task of central banks.
- **Public finances.** Numerous governments face a combination of elevated debt levels, higher borrowing costs and moderate growth. This constitutes a challenging environment for public finances at a time when governments face major structural challenges (climate action, defence capabilities, age-related outlays). These developments could give birth in some countries to market tensions (widening sovereign bond spreads) and affect activity through several channels (higher interest rates, higher taxes, reduced government spending).
- **Climate events and policies.** Climate change related developments can generate adverse shocks through various channels. First, announced climate policy measures are susceptible to trigger social protests, raise uncertainties, weigh on confidence; these developments can generate turbulences in financial markets and put a brake on some spending categories. Second, extreme weather events may disrupt activity (destructions, supply chain disruptions), weigh on real estate prices and take insurance and financial market premia up.

The adverse and severe scenarios assume the materialisation of these identified risks from the third quarter of 2025. While downside risks are shared by these scenarios, the impacts are assumed to be markedly higher in the severely adverse scenario, due to both more pronounced direct shocks (notably higher commodity prices) and the development of a negative spiral between key driving factors (activity, public debt, bond yields, equity markets).

Among the considered countries, GDP levels in the adverse scenario stand between 7.8% and 11% lower than in the baseline scenario at the end of the shock period. This deviation reaches 8.2% in the Eurozone and 8.5% in the United States. In the severe scenario, GDP levels stand between 11.5% and 16.1% lower than in the baseline scenario at the end of the shock period. This deviation reaches 12% in the Eurozone and 12.5% in the United States.

### *Scenario weighting and cost of risk sensitivity*

At 30 June 2025, the weight of the favourable scenario considered by the Group was 30%, and 15% for the adverse scenario and 5% for the severe scenario. At 31 December 2024, the weight of the favourable scenario was 28%, 17% for the adverse scenario and 5% for the severe scenario.

The sensitivity of the amount of expected credit losses for all financial assets at amortised cost or at fair value through equity and credit commitments is assessed by comparing the estimated expected credit losses resulting from the weighting of the above scenarios with that resulting from each of the two main scenarios:

- an increase in ECL of 21%, or EUR 880 million according to the adverse scenario (21% at 31 December 2024);
- a decrease in ECL of 14%, or EUR 560 million according to the favourable scenario (14% at 31 December 2024).

## Post-model adjustments

Post-model adjustments are made when system limitations are identified in a particular context, for instance, in the case of insufficient statistical data to reflect the specific situation in the models. Post-model adjustments are also considered to take into account, where applicable, the consequences of climatic events on expected credit losses.

Notably, additional adjustments were made in 2022 to take into account the effects of inflation and interest rate hikes when this effect is not directly estimated by the models. For example, within the consumer credit specialist business, adjustments were considered for the categories of customers most sensitive to the gradual decline in the level of their net income. Given the evolution of the macroeconomic context in 2023 and 2024, these adjustments have been reassessed and had been gradually reversed or used.

All of these adjustments represent 3% of the total amount of expected credit losses at 30 June 2025, compared with 3.7 % at 31 December 2024.

## 2.h OTHER NET LOSSES FOR RISK ON FINANCIAL INSTRUMENTS

The expected and realised cash flow losses relating to the risk of loss of cash flows on financial instruments granted that are not linked to the counterparty's default, but to legal risks calling into question the validity or enforceability of such contracts are presented under "Other net losses for risk on financial instruments".

The effect on expected cash flows due to these risks is considered as a change in the contract's cash flows, in accordance with IFRS 9 B5.4.6, and is recorded as a decrease in the gross value of the asset. Expected losses on derecognised financial instruments, as is the case when loans have been repaid, are recognised in accordance with IAS 37 in "Provisions for risks and charges" (see note 4.k).

For the first half of 2025, the expenses relate:

- On the one hand, on Swiss franc-denominated or Swiss franc-indexed mortgage loans granted in Poland, for an amount of 75 million euros, compared to 49 million euros in the first half of 2024.
- On the other hand, on the renewable loans granted in Spain, due to the rulings made by the Supreme Court regarding requirements for information transparency, for an amount of 40 million euros.

## 2.i NET GAIN ON NON-CURRENT ASSETS

In millions of euros	First half 2025	First half 2024
Gain or loss on investments in consolidated undertakings (note 7.d)	194	170
Gain or loss on tangible and intangible assets	9	(6)
Results from net monetary position	(161)	(142)
<b>Net gain on non-current assets</b>	<b>42</b>	<b>22</b>

According to IAS 29 in connection with the hyperinflation situation of the economy in Türkiye, the line “Results from net monetary positions” corresponds to the effect of the revaluation of the monetary assets net of the evolution of the consumer price index in Türkiye on the valuation of non-monetary assets and liabilities (- EUR 259 million) and on income from the Turkish government bonds portfolio indexed to inflation and held by Turk Ekonomi Bankasi AS (+ EUR 98 million, reclassified from interest margin) for the first half 2025 (respectively - EUR 293 million and + EUR 152 million for the first half 2024).

## 2.j CORPORATE INCOME TAX

In millions of euros	First half 2025	First half 2024
Net current tax expense	(1,822)	(1,109)
Net deferred tax expense	(466)	(943)
<b>Corporate income tax expense</b>	<b>(2,288)</b>	<b>(2,052)</b>

### 3. SEGMENT INFORMATION

The Group is composed of three operating divisions:

- **Corporate & Institutional Banking (CIB)** which covers Global Banking, Global Markets and Securities Services;
- **Commercial, Personal Banking & Services (CPBS)** which covers Commercial & Personal banking in the Eurozone, with Commercial & Personal Banking in France (CPBF), Commercial & Personal Banking in Italy (BNL bc), Commercial & Personal Banking in Belgium (CPBB) and Commercial & Personal Banking in Luxembourg (CPBL); Commercial & Personal banking outside the Eurozone, which is organised around Europe-Mediterranean, to cover Central and Eastern Europe and Türkiye. Lastly, it also covers specialised businesses, (Arval, BNP Paribas Leasing Solutions, BNP Paribas Personal Finance, BNP Paribas Personal Investors and New Digital Businesses like Nickel, Floa, Lyf);
- **Investment & Protection Services (IPS)** which covers Insurance (BNP Paribas Cardif), Wealth and Asset Management (BNP Paribas Asset Management, BNP Paribas Wealth Management and BNP Paribas Real Estate), Management of the BNP Paribas Group's portfolio of unlisted and listed industrial and commercial investments (BNP Paribas Principal Investments).

Other Activities mainly include activities related to the Group's central treasury function, some costs related to cross-business projects, the residential mortgage lending business of Personal Finance (a significant part of which is managed in run-off), and certain investments.

They also include non-recurring items resulting from applying the rules on business combinations. In order to provide consistent and relevant economic information for each core business, the impact of amortising fair value adjustments recognised in the net equity of entities acquired and restructuring costs incurred in respect to the integration of entities, have been allocated to the "Other Activities" segment. The same applies to transformation, adaptation and IT reinforcement costs relating to the Group's savings programmes.

In addition, Other Activities carry the impact, related to the application of IFRS 17, of the reclassification as a deduction from revenues of the operating expenses "attributable to insurance contracts" of the Group's business lines (other than Insurance) that distribute insurance contracts (i.e., internal distributors), in order not to disrupt the readability of their financial performance. This is also the case for the impact of the volatility on the financial result generated by the recognition at fair value through profit or loss of assets backing insurance entities' equity or non-participating contracts. In the event of divestment connected to this portfolio, the realised gains or losses are allocated to the revenues of the Insurance business line.

Inter-segment transactions are conducted at arm's length. The segment information presented comprises agreed inter-segment transfer prices.

The capital allocation is carried out on the basis of risk exposure, taking into account various conventions relating primarily to the capital requirement of the business as derived from the risk-weighted asset calculations required under capital adequacy rules. Normalised equity income by segment is determined by attributing to each segment the income of its allocated equity. The capital allocation to segments is based on a minimum of 12% of weighted assets. The breakdown of balance sheet by core business follows the same rules as the breakdown of the profit or loss by core business.

In order to present a consistent reference with the presentation of the financial statements and the results applied from 1 January 2025, the quarterly series for the 2024 financial year include the main effects described below:

- The change in the allocation of normalised equity from 11% to 12% of risk-weighted assets: as part of the coming into force of the finalisation of Basel 3 on 1 January 2025, and in line with its CET1 target of 12%, the Group decided to change the normalized equity allocated to its business lines, excluding Insurance, to 12% of risk-weighted assets, from 11% previously, as of 1 January 2025;
- The impact of this transposition (the finalisation of Basel 3)<sup>4</sup> on the level of risk-weighted assets;

<sup>4</sup> Transposition into European law of the finalisation of Basel 3 by Regulation (EU) 2024/1623 of the European Parliament and of the Council of 31 May 2024 amending Regulation (EU) 575/2013, published in the Official Journal of the European Union on 19 June 2024.

- Full consolidation in the prudential scope of entities under the exclusive control of the Arval business as if it had occurred on 1 January 2024 (instead of 1 July 2024);
- The geographical focus (sale and run-off of businesses in 10 countries) carried out by Personal Finance: it leads to the reclassification of income and business data from the non-strategic, or non-core, perimeter (equivalent to the activities put into run-off) in the Corporate Centre; Personal Finance's profit and loss account therefore corresponds to the remaining strategic, or core, perimeter;
- A change in revenue allocation methodology between Wealth Management and Corporate Centre.

## 4. NOTES TO THE BALANCE SHEET AT 30 JUNE 2025

### 4.a FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH PROFIT OR LOSS

#### FINANCIAL ASSETS AND LIABILITIES AT FAIR VALUE THROUGH PROFIT OR LOSS

Financial assets and financial liabilities at fair value through profit or loss consist of held-for-trading transactions - including derivatives - of certain assets and liabilities designated by the Group as at fair value through profit or loss at the time of issuance and of non-trading instruments whose characteristics prevent their accounting at amortised cost or at fair value through equity.

	30 June 2025				31 December 2024

Detail of these assets and liabilities is provided in note 4.c.

- **Financial liabilities designated as at fair value through profit or loss**

Financial liabilities at fair value through profit or loss mainly consist of issued debt securities, originated and structured on behalf of customers, where the risk exposure is managed in combination with the hedging strategy. These types of issued debt securities contain significant embedded derivatives, which changes in value may be compensated by changes in the value of economic hedging derivatives.

The redemption value of debt issued and designated as at fair value through profit or loss at 30 June 2025 was EUR 118,347 million (EUR 110,823 million at 31 December 2024).

- **Other financial assets measured at fair value through profit or loss**

Other financial assets at fair value through profit or loss are financial assets not held for trading:

- debt instruments that do not meet the criteria defined by IFRS 9 to be classified as financial instruments at "fair value through equity" or at "amortised cost":
  - their business model is not to "collect contractual cash flows" nor "collect contractual cash flows and sell the instruments"; and/or
  - their cash flows are not solely repayments of principal and interest on the principal amount outstanding.
- equity instruments that the Group did not choose to classify as at "fair value through equity".

## DERIVATIVE FINANCIAL INSTRUMENTS

The majority of derivative financial instruments held for trading are related to transactions initiated for trading purposes. They may result from market-making or arbitrage activities. BNP Paribas actively trades in derivatives. Transactions include trades in “ordinary” instruments such as credit default swaps, and structured transactions with complex risk profiles tailored to meet the needs of its customers. The net position is in all cases subject to limits.

Some derivative instruments are also contracted to hedge financial assets or financial liabilities for which the Group has not documented a hedging relationship, or which do not qualify for hedge accounting under IFRS.

In millions of euros, at	30 June 2025		31 December 2024	
	Positive market value	Negative market value	Positive market value	Negative market value
Interest rate derivatives	117,188	87,824	121,491	95,045

Credit institutions	11,626	(239)	11,148	(306)
Others	1,846	(6)	3,433	(2)
<b>Equity securities</b>	<b>1,465</b>	<b>401</b>	<b>1,610</b>	<b>489</b>
<b>Total financial assets at fair value through equity</b>	<b>80,636</b>	<b>(451)</b>	<b>73,040</b>	<b>(796)</b>

Debt securities at fair value through equity include EUR 105 million classified as stage 3 at 30 June 2025 (EUR 106 million at 31 December 2024). For these securities, the credit impairment recognised in the profit and loss account has been charged to the negative changes in value recognised in equity amounting to EUR 102 million at 30 June 2025 (unchanged compared with 31 December 2024).

The option to recognise certain equity instruments at fair value through equity was retained in particular for shares held through strategic partnerships and shares that the Group is required to hold in order to carry out certain activities.

During the first half of 2025, the Group sold several investments and a net loss of -EUR 8 million was transferred to "retained earnings" (a net gain of +EUR 164 million for the first half of 2024).

## 4.C MEASUREMENT OF THE FAIR VALUE OF FINANCIAL INSTRUMENTS

### VALUATION PROCESS

BNP Paribas has retained the fundamental principle that it should have a unique and integrated processing chain for producing and controlling the valuations of financial instruments that are used for the purpose of daily risk management and financial reporting. All these processes are based on a common economic valuation which is a core component of business decisions and risk management strategies.

Economic value is composed of mid-market value, to which valuation adjustments are made.

Mid-market value is derived from external data or valuation techniques that maximise the use of observable and market-based data. Mid-market value is a theoretical additive value which does not take account of i) the direction of the transaction or its impact on the existing risks in the portfolio, ii) the nature of the counterparties, and iii) the aversion of a market participant to particular risks inherent in the instrument, the market in which it is traded, or the risk management strategy.

Valuation adjustments take into account valuation uncertainty and include market and credit risk premiums to reflect costs that could be incurred in case of an exit transaction in the principal market.

Fair value generally equals the economic value, subject to limited adjustments, such as own credit adjustments, which are specifically required by IFRS standards.

The main valuation adjustments are presented in the section below.

### VALUATION ADJUSTMENTS

Valuation adjustments retained by BNP Paribas for determining fair values are as follows:

***Bid/offer adjustments:*** the bid/offer range reflects the additional exit cost for a price taker and symmetrically the compensation sought by dealers to bear the risk of holding the position or closing it out by accepting another dealer's price.

BNP Paribas assumes that the best estimate of an exit price is the bid or offer price, unless there is evidence that another point in the bid/offer range would provide a more representative exit price.

***Input uncertainty adjustments:*** when the observation of prices or data inputs required by valuation techniques is difficult or irregular, an uncertainty exists on the exit price. There are several ways to gauge the degree of uncertainty on the exit price such as measuring the dispersion of the available price indications or estimating the possible ranges of the inputs to a valuation technique.

***Model uncertainty adjustments:*** these relate to situations where valuation uncertainty is due to the valuation technique used, even though observable inputs might be available. This situation arises when the risks inherent in the instruments are different from those available in the observable data, and therefore the valuation technique involves assumptions that cannot be easily corroborated.

***Future Hedging Costs adjustments (FHC):*** this adjustment applies to positions that require dynamic hedging throughout their lifetime leading to additional bid/offer costs. Calculation methods capture these expected costs in particular based on the optimal hedging frequency.

***Credit valuation adjustment (CVA):*** the CVA adjustment applies to valuations and market quotations whereby the credit worthiness of the counterparty is not reflected. It aims to account for the possibility that the counterparty may default and that BNP Paribas may not receive the full fair value of the transactions.

In determining the cost of exiting or transferring counterparty risk exposures, the relevant market is deemed to be an inter-dealer market. However, the determination of CVA remains judgemental due to i) the possible absence or lack

of price discovery in the inter-dealer market, ii) the influence of the regulatory landscape relating to counterparty risk on the market participants' pricing behaviour and iii) the absence of a dominant business model for managing counterparty risk.

The CVA model is grounded on the same exposures as those used for regulatory purposes. The model attempts to estimate the cost of an optimal risk management strategy based on i) implicit incentives and constraints inherent in the regulations in force and their evolutions, ii) market perception of the probability of default, and iii) default parameters used for regulatory purposes.

**Funding valuation adjustment (FVA):** when valuation techniques are used for the purpose of deriving fair value, funding assumptions related to the future expected cash flows are an integral part of the mid-market valuation, notably through the use of appropriate discount rates. These assumptions reflect what the Bank anticipates as being the effective funding conditions of the instrument that a market participant would consider. This notably takes into account the existence and terms of any collateral agreement. In particular, for non- or imperfectly collateralised derivative instruments, they include an explicit adjustment to the interbank interest rate.

**Own-credit valuation adjustment for debts (OCA) and for derivatives (debit valuation adjustment - DVA):** OCA and DVA are adjustments reflecting the effect of credit worthiness of BNP Paribas, on respectively the value of debt securities designated as at fair value through profit or loss and derivatives. Both adjustments are based on the expected future liability profiles of such instruments. The own credit worthiness is inferred from the market-based observation of the relevant bond issuance levels. The DVA adjustment is determined after taking into account the Funding Valuation Adjustment (FVA).

Thus, the carrying value of debt securities designated as at fair value through profit or loss increased by EUR 256 million at 30 June 2025, compared with an increase in value of EUR 388 million at 31 December 2024, i.e. a -EUR 132 million variation recognised directly in equity that will not be reclassified to profit or loss.

## INSTRUMENT CLASSES AND CLASSIFICATION WITHIN THE FAIR VALUE HIERARCHY FOR ASSETS AND LIABILITIES MEASURED AT FAIR VALUE

As explained in the summary of significant accounting policies (note 1.f.10), financial instruments measured at fair value are categorised into a fair value hierarchy consisting of three levels.

In millions of euros, at	30 June 2025											
	Financial instruments held for trading				Instruments at fair value through profit or loss not held for trading				Financial assets at fair value through equity			
	Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3	Total

Fair values of derivatives are broken down by dominant risk factor, namely interest rate, foreign exchange, credit and equity. Derivatives used for hedging purposes are mainly interest rate derivatives.

Transfers between levels may occur when an instrument fulfils the criteria defined, which are generally market and product dependent. The main factors influencing transfers are changes in the observation capabilities, passage of time, and events during the transaction lifetime. The timing of recognising transfers is determined at the beginning of the reporting period.

During the first half of 2025, transfers between Level 1 and Level 2 were not significant.

## DESCRIPTION OF MAIN INSTRUMENTS IN EACH LEVEL

The following section provides a description of the instruments in each level in the hierarchy. It describes notably instruments classified in Level 3 and the associated valuation methodologies.

For main trading book instruments and derivatives classified in Level 3, further quantitative information is provided about the inputs used to derive fair value.

### Level 1

This level encompasses all derivatives and securities that are quoted continuously in active markets.

Level 1 includes notably equity securities and liquid bonds, shortselling of these instruments, derivative instruments traded on organised markets (futures, options, etc.). It includes shares of funds and UCITS, for which the net asset value is calculated on a daily basis.

## Level 2

**The Level 2 stock of securities** is composed of securities which are less liquid than the Level 1 bonds. They are predominantly corporate debt securities, government bonds, mortgage backed securities, fund shares and short-term securities such as certificates of deposit. They are classified in Level 2 notably when external prices for the same security can be regularly observed from a reasonable number of market makers that are active in this security, but these prices do not represent directly tradable prices. This comprises amongst other, consensus pricing services with a reasonable number of contributors that are active market makers as well as indicative runs from active brokers and/or dealers. Other sources, such as primary issuance market, may also be used where relevant.

**Repurchase agreements** are classified predominantly in Level 2. The classification is primarily based on the observability and liquidity of the repo market, depending on the underlying collateral and the maturity of the repo transaction.

**Debts issued** designated as at fair value through profit or loss, are classified in the same level as the one that would apply to the embedded derivative taken individually. The issuance spread is considered observable.

**Derivatives** classified in Level 2 comprise mainly the following instruments:

- vanilla instruments such as interest rate swaps, caps, floors and swaptions, credit default swaps, equity/foreign exchange (FX)/commodities forwards and options;
- structured derivatives for which model uncertainty is not significant such as exotic FX options, mono- and multi-underlying equity/funds derivatives, single curve exotic interest rate derivatives and derivatives based on structured rates.

The above derivatives are classified in Level 2 when there is a documented stream of evidence supporting one of the following:

- fair value is predominantly derived from prices or quotations of other Level 1 and Level 2 instruments, through standard market interpolation or stripping techniques whose results are regularly corroborated by real transactions;
- fair value is derived from other standard techniques such as replication or discounted cash flows that are calibrated to observable prices, that bear limited model risk and enable an effective offset of the risks of the instrument through trading Level 1 or Level 2 instruments;
- fair value is derived from more sophisticated or proprietary valuation techniques but is directly evidenced through regular back-testing using external market-based data.

Determining whether an over-the-counter (OTC) derivative is eligible for Level 2 classification involves judgement. Consideration is given to the origin, transparency and reliability of external data used, and the amount of uncertainty associated with the use of models. It follows that the Level 2 classification criteria involve multiple analysis axis within an “observability zone” whose limits are determined by i) a predetermined list of product categories and ii) the underlying and maturity bands. These criteria are regularly reviewed and updated, together with the applicable valuation adjustments, so that the classification by level remains consistent with the valuation adjustment policy.

### Level 3

**Level 3 securities** of the trading book mainly comprise units of funds and unlisted equity shares measured at fair value through profit or loss or through equity.

Unlisted private equities are systematically classified as Level 3, with the exception of UCITS with a daily net asset value, which are classified in Level 1 of the fair value hierarchy.

Shares and other unlisted variable income securities in Level 3 are valued using one of the following methods: a share of revalued net book value, multiples of comparable companies, future cash flows method, multi-criteria approach.

**Repurchase agreements, mainly long-term or structured repurchase agreements on corporate bonds and ABS:** the valuation of these transactions requires proprietary methodologies given the bespoke nature of the transactions and the lack of activity and price discovery in the long-term repo market. The curves used in the valuation are corroborated using available data such as recent long-term repo trade data and price enquiry data. Valuation adjustments applicable to these exposures are commensurate with the degree of uncertainty inherent in the modelling choices and amount of data available.

**Debts issued** designated as at fair value through profit or loss, are classified in the same level as the one that would apply to the embedded derivative taken individually. The issuance spread is considered observable.

### **Derivatives**

**Vanilla derivatives** are classified in Level 3 when the exposure is beyond the observation zone for rate curves or volatility surfaces, or relates to less liquid markets such as tranches on old credit index series or emerging markets interest rates markets. The main instruments are:

- **Interest rate derivatives:** exposures mainly comprise swap products in less liquid currencies. Classification is driven by the lower liquidity of some maturities, while observation capabilities through consensus may be available. The valuation technique is standard, and uses external market information and extrapolation techniques.
- **Credit derivatives (CDS):** exposures mainly comprise CDSs beyond the maximum observable maturity and, to a much lesser extent, CDSs on illiquid or distressed names and CDSs on loan indices. Classification is driven by the lack of liquidity while observation capabilities may be available notably through consensus. Level 3 exposures also comprise CDS and Total Return Swaps (TRS) positions on securitised assets. These are priced along the same modelling techniques as the underlying bonds, taking into consideration the funding basis and specific risk premium.
- **Equity derivatives:** exposures essentially comprise long dated forward or volatility products or exposures where there is a limited market for optional products. The marking of the forward curves and volatility surfaces beyond the maximum observable maturity relies on extrapolation techniques. However, when there is no market for model input, volatility or forward is generally determined on the basis of proxy or historical analysis. Similarly, long-term transactions on equity baskets are also classified in Level 3, based on the absence of equity correlation observability on long maturities.

These vanilla derivatives are subject to valuation adjustments linked to uncertainty on liquidity, specialised by nature of underlying and liquidity bands.

**Structured derivatives** classified in Level 3 predominantly comprise hybrid products (FX/Interest Rates hybrids, Equity hybrids), credit correlation products, prepayment-sensitive products, some stock basket optional products and some interest rate optional instruments. The main exposures are described below, with insight into the related valuation techniques and on the source of uncertainty:

- **Structured interest rate options** are classified in Level 3 when they involve currencies where there is not sufficient observation or when they include a quanto feature where the pay-off is measured with a forex forward fixed rate (except for the main currencies). Long term structured derivatives are also classified in Level 3.
- **Hybrid FX/Interest rate products** essentially comprise a specific product family known as Power Reverse Dual Currency (PRDC) when there is material valuation uncertainty. When valuation of PRDCs requires sophisticated modelling of joint behaviour of FX and interest rate, and is notably sensitive to the unobservable FX/ interest rate correlations, such products are classified as Level 3. PRDCs valuations are corroborated with recent trade data and consensus data.
- **Securitisation swaps** mainly comprise fixed-rate swaps, cross-currency or basis swaps whose notional is indexed to the prepayment behaviour of some underlying portfolio. The estimation of the maturity profile of securitisation swaps is corroborated by statistical estimates using external historical data.
- **Forward volatility options** are generally products whose pay-off is indexed to the future variability of a rate index such as volatility swaps. These products involve material model risk as it is difficult to infer forward volatility information from market-traded instruments. The valuation adjustment framework is calibrated to the uncertainty inherent in the product, and to the range of uncertainty from the existing external consensus data.
- **Inflation derivatives** classified in Level 3 mainly comprise swap products on inflation indices that are not associated with a liquid indexed bond market, optional products on inflation indices (such as caps and floors) and other forms of inflation indices involving optionality on the inflation indices or on the inflation annual rate. Valuation techniques used for inflation derivatives are predominantly standard market models. Proxy techniques are used for a few limited exposures. Although the valuations are corroborated through monthly consensus data, these products are classified as Level 3 due to their lack of liquidity and some uncertainties inherent in the calibration.
- The valuation of **bespoke CDO** requires correlation of default events when there is material valuation uncertainty. This information is inferred from the active index tranche market through a proprietary projection technique and involves proprietary extrapolation and interpolation techniques. Multi-geography CDO further require an additional correlation assumption. Finally, the bespoke CDO model also involves proprietary assumptions and parameters related to the dynamic of the recovery factor. CDO modelling is calibrated on the observable index tranche markets, and is regularly back-tested against consensus data on standardised pools. The uncertainty arises from the model risk associated with the projection and geography mixing technique, and the uncertainty of associated parameters, together with the recovery modelling.
- **N to Default baskets** are other forms of credit correlation products, modelled through standard copula techniques. The main inputs required are the pair-wise correlations between the basket components which can be observed in the consensus and the transactions. Linear baskets are considered observable.
- **Equity and equity-hybrid correlation products** are instruments whose pay-off is dependent on the joint behaviour of a basket of equities/indices leading to a sensitivity of the fair value measurement to the correlation amongst the basket components. Hybrid versions of these instruments involve baskets that mix equity and non-equity underlyings such as commodity indices, or foreign exchange rates. Only a subset of the Equity/index correlation matrix is regularly observable and traded, while most cross-asset correlations are not active. Therefore, classification in Level 3 depends on the composition of the basket, the maturity, and the hybrid nature of the product. The correlation input is derived from a proprietary model combining historical estimators, and other adjustment factors, that are corroborated by reference to recent trades or external data. The correlation matrix is essentially available from consensus services, and when a correlation between two underlying instruments is not available, it might be obtained from extrapolation or proxy techniques.

These structured derivatives are subject to specific valuation adjustments to cover uncertainties linked to liquidity, parameters and model risk.

### Valuation adjustments (CVA, DVA and FVA)

The valuation adjustment for counterparty credit risk (CVA), own-credit risk for derivatives (DVA) and the explicit funding valuation adjustment (FVA) are deemed to be unobservable components of the valuation framework and therefore classified in Level 3. This does not impact, in general cases, the classification of individual transactions into the fair value hierarchy. However, a specific process allows to identify individual deals for which the marginal contribution of these adjustments and related uncertainty is significant and justifies classifying these transactions in Level 3.

The table below provides the range of values of main unobservable inputs for the valuation of Level 3 financial instruments. The ranges displayed correspond to a variety of different underlying instruments and are meaningful only in the context of the valuation technique implemented by BNP Paribas. The weighted averages, where relevant and available, are based on fair values, nominal amounts or sensitivities.

The main unobservable parameters used for the valuation of debt issued in Level 3 are equivalent to those of their economic hedge derivative. Information on those derivatives, displayed in the following table, is also applicable to these debts.

Risk classes	Balance Sheet valuation <i>(in millions of euros)</i>		Main product types composing the Level 3 stock within the risk class	Valuation technique used for the product types considered	Main unobservable inputs for the product types considered	Range of unobservable input across Level 3 population considered	Weighted average
	Asset	Liability					
Repurchase agreements	7	1,421	Long-term repo and reverse-repo agreements	Proxy techniques, based amongst other on the funding basis of a benchmark bond pool, that is actively traded and representative of the repo underlying	Long-term repo spread on private bonds (High Yield, High Grade) and on ABS	0 bp to 152 bp	41 bp (a)
Interest rate derivatives	1,208	1,604	Hybrid Forex / Interest rates derivatives	Hybrid Forex interest rate option pricing model	Correlation between FX rate and interest rates. Main currency pairs are EUR/JPY, USD/JPY, AUD/JPY	3% to 57%	41% (a)
			Hybrid inflation rates / Interest rates derivatives	Hybrid inflation interest rate option pricing model	Correlation between interest rates and inflation rates mainly in Europe.	18% to 52%	42%
			Floors and caps on inflation rate or on the cumulative inflation (such as redemption floors), predominantly on European and French inflation	Inflation pricing model	Volatility of cumulative inflation	1.1% to 11.5%	(b)
					Volatility of the year-on-year inflation rate	0.3% to 2.3%	
			Forward Volatility products such as volatility swaps, mainly in euros	Interest rates option pricing model	Forward volatility of interest rates	0.5% to 0.8%	(b)
			Balance-guaranteed fixed rate, basis or cross currency swaps, predominantly indexed on European collateral pools	Prepayment modelling Discounted cash flows	Constant prepayment rates	0% to 25%	0.3% (a)
Credit derivatives	415	368	Collateralised Debt Obligations and index tranches for inactive index series	Base correlation projection technique and recovery modelling	Base correlation curve for bespoke portfolios	23% to 92%	(b)
					Recovery rate variance for single name underlyings	0% to 25 %	(b)
			N-to-default baskets	Credit default model	Default correlation	50% to 83%	54% (a)
			Single name Credit Default Swaps (other than CDS on ABs and loans indices)	Stripping, extrapolation and interpolation	Credit default spreads beyond observation limit (10 years)	156 bp to 325 bp	204 bp
					Illiquid credit default spread curves (across main tenors)	4 bp to 2,286 bp (1)	78 bp (c)
Equity derivatives	2,811	7,175	Simple and complex derivatives on multi-underlying baskets on stocks	Various volatility option models	Unobservable equity volatility	1% to 256% (2)	26% (d)
					Unobservable equity correlation	3% to 99%	60% (c)

(1) The upper bound of the range relates to building, retail and services sector issuers that represent an insignificant portion of the balance sheet (CDS with illiquid underlying instruments)

(2) The underlyings with implied volatility greater than 50% have a very limited exposure

(a) Weights based on relevant risk axis at portfolio level

(b) No weighting, since no explicit sensitivity is attributed to these inputs

(c) Weighting is not based on risks, but on an alternative methodology in relation with the Level 3 instruments (present value or notional)

(d) Simple averaging

**TABLE OF MOVEMENTS IN LEVEL 3 FINANCIAL INSTRUMENTS**

For Level 3 financial instruments, the following movements occurred during the first half of 2025:

	Financial assets				Financial liabilities		
	Financial instruments at fair value through profit or loss held for trading	Financial instruments at fair value through profit or loss not held for trading	Financial assets at fair value through equity	TOTAL	Financial instruments at fair value through profit or loss held for trading	Financial instruments designated as at fair value through profit or loss	TOTAL
In millions of euros							
At 31 December 2024	7,139	9,744	769	17,652	(10,495)	(38,557)	(49,052)
Purchases	1,440	565	437	2,442			-
Issues				-		(12,287)	(12,287)
Sales	(632)	(917)	(160)	(1,709)	37		37
Settlements <sup>(1)</sup>	972	(95)	(15)	862	(1,160)	10,210	9,050
Transfers to Level 3	1,081	59	651	1,791	(310)	(836)	(1,146)
Transfers from Level 3	(951)	(12)	(88)	(1,051)	845	628	1,473
Gains (or losses) recognised in profit or loss with respect to transactions expired or terminated during the period	225	254	10	489	(127)	(40)	(167)
Gains (or losses) recognised in profit or loss with respect to unexpired instruments at the end of the period	(1,781)			(1,781)	98	43	141
Items related to exchange rate movements	(112)	(110)	(33)	(255)	9	153	162
Changes in fair value of assets and liabilities recognised in equity				-			-
At 30 June 2025	7,381	9,488	1,571	18,440	(11,103)	(40,686)	(51,789)

<sup>(1)</sup> For the assets, includes redemptions of principal, interest payments as well as cash inflows and outflows relating to derivatives. For the liabilities, includes principal redemptions, interest payments as well as cash inflows and outflows relating to derivatives the fair value of which is negative.

Transfers out of Level 3 of derivatives include mainly the update of the observability tenor of certain yield curves, and of market parameters related to repurchase agreements and credit transactions but also the effect of derivatives becoming only or mainly sensitive to observable inputs due to the shortening of their lifetime.

Transfers into Level 3 of instruments at fair value reflect the effect of the regular update of the observability zones.

Transfers have been reflected as if they had taken place at the beginning of the reporting period.

The Level 3 financial instruments may be hedged by other Level 1 and Level 2 instruments, the gains and losses of which are not shown in this table. Consequently, the gains and losses shown in this table are not representative of the gains and losses arising from management of the net risk on all these instruments.

**SENSITIVITY OF FAIR VALUE TO REASONABLY POSSIBLE CHANGES IN LEVEL 3 ASSUMPTIONS**

The following table summarises those financial assets and financial liabilities classified as Level 3 for which alternative assumptions in one or more of the unobservable inputs would change fair value significantly.

The amounts disclosed are intended to illustrate the range of possible uncertainty inherent to the judgement applied when estimating Level 3 parameters, or when selecting valuation techniques. These amounts reflect valuation uncertainties that prevail at the measurement date, and even though such uncertainties predominantly derive from the portfolio sensitivities that prevailed at that measurement date, they are not predictive or indicative of future movements in fair value, nor do they represent the effect of market stress on the portfolio value.

In estimating sensitivities, BNP Paribas either remeasured the financial instruments using reasonably possible inputs, or applied assumptions based on the valuation adjustment policy.

For the sake of simplicity, the sensitivity on cash instruments that are not relating to securitised instruments was based on a uniform 1% shift in the price. More specific shifts were however calibrated for each class of the Level 3 securitised exposures, based on the possible ranges of the unobservable inputs.

For derivative exposures, the sensitivity measurement is based on the credit valuation adjustment (CVA), the explicit funding valuation adjustment (FVA) and the parameter and model uncertainty adjustments related to Level 3.

Regarding the credit valuation adjustment (CVA) and the explicit funding valuation adjustment (FVA), the uncertainty was calibrated based on prudent valuation adjustments described in the technical standard "Prudent Valuation" published by the European Banking Authority. For other valuation adjustments, two scenarios were considered: a favourable scenario where all or portion of the valuation adjustment is not considered by market participants, and an unfavourable scenario where market participants would require twice the amount of valuation adjustments considered by BNP Paribas for entering into a transaction.

#### DEFERRED MARGIN ON FINANCIAL INSTRUMENTS MEASURED USING TECHNIQUES DEVELOPED INTERNALLY AND BASED ON INPUTS PARTLY UNOBSERVABLE IN ACTIVE MARKETS

Deferred margin on financial instruments ("Day One Profit") primarily concerns the scope of financial instruments eligible for Level 3 and to a lesser extent some financial instruments eligible for Level 2 where valuation adjustments for uncertainties regarding parameters or models are not negligible compared with the initial margin.

The Day One Profit is calculated after setting aside valuation adjustments for uncertainties as described previously and released to profit or loss over the expected period for which the inputs will be unobservable. The unamortised amount is included under "Financial instruments at fair value through profit or loss" as a reduction in the fair value of the relevant transactions.

In millions of euros	Deferred margin at 31 December 2024	Deferred margin on transactions during the period	Margin taken to the profit and loss account during the period	Deferred margin at 30 June 2025

<b>Total off-balance sheet impaired commitments (stage 3)</b>	<b>2,438</b>	<b>(318)</b>	<b>2,120</b>	<b>749</b>

The following table presents the changes in gross exposures of stage 3 assets (EU CR2):

Gross value In millions of euros	First half 2025	First half 2024
<b>Impaired exposures (Stage 3) at opening balance</b>	<b>26,166</b>	<b>25,570</b>
Transfer to stage 3	4,207	4,601
Transfer to stage 1 or stage 2	(916)	(1,067)
Assets written off	(1,715)	(1,870)
Other changes	(1,476)	(1,496)
<b>Impaired exposures (Stage 3) at closing balance</b>	<b>26,266</b>	<b>25,738</b>

## 4.f FINANCIAL LIABILITIES AT AMORTISED COST DUE TO CREDIT INSTITUTIONS AND CUSTOMERS

In millions of euros, at	30 June 2025	31 December 2024
<b>Deposits from credit institutions</b>	<b>111,800</b>	<b>66,872</b>
On demand accounts	12,033	10,608
Interbank borrowings <sup>(1)</sup>	44,081	33,753
Repurchase agreements	55,686	22,511
<b>Deposits from customers</b>	<b>1,024,734</b>	<b>1,034,857</b>
On demand deposits	568,315	562,520
Savings accounts	166,964	162,064
Term accounts and short-term notes	287,123	307,335
Repurchase agreements	2,332	2,938

<sup>(1)</sup> Interbank borrowings from credit institutions include term borrowings from central banks. At 30 June 2025 no TLTRO III borrowings were recorded on the balance sheet, unchanged from 31 December 2024 (see note 2.a Net Interest Income).

## 4.g DEBT SECURITIES AND SUBORDINATED DEBT

This note covers all issued debt securities and subordinated debt measured at amortised cost and designated as at fair value through profit or loss.

- Debt securities designated at fair value through profit or loss (note 4.a)

Issuer / Issue date	Currency	Original amount in foreign currency (millions)	Date of call or interest step-up	Interest rate	Interest rate reset	Conditions precedent for coupon payment <sup>(1)</sup>	30 June 2025	31 December 2024
In millions of euros, at								
<b>ISSUED DEBT SECURITIES AND SUBORDINATED DEBT</b>							<b>112,610</b>	<b>104,934</b>
<b>Debt securities</b>							<b>111,817</b>	<b>104,118</b>
<b>Subordinated debt</b>							<b>793</b>	<b>816</b>
- Redeemable subordinated debt			<sup>(2)</sup>				<b>18</b>	<b>18</b>
- Perpetual subordinated debt							<b>775</b>	<b>798</b>
BNP Paribas Fortis Dec. 2007 <sup>(3)</sup>	EUR	3,000	Dec.-14	3-month Euribor +200 bp		A	775	798

<sup>(1)</sup> Conditions precedent for coupon payment:

A Coupon payments are halted should the issuer have insufficient capital or the underwriters become insolvent or when the dividend declared for Ageas shares falls below a certain threshold.

<sup>(2)</sup> After agreement from the banking supervisory authority and at the issuer's initiative, redeemable subordinated debt issues may contain a call provision authorising the Group to redeem the securities prior to maturity by repurchasing them in the stock market, via public tender offers, or in the case of private placements over the counter. Debt issued by BNP Paribas SA or foreign subsidiaries of the Group via placements in the international markets may be subject to early redemption of the capital and early payment of interest due at maturity at the issuer's discretion on or after a date stipulated in the issue particulars (call option), or in the event that changes in the applicable tax rules oblige the BNP Paribas Group issuer to compensate debt-holders for the consequences of such changes. Redemption may be subject to a notice period of between 15 and 60 days, and is in all cases subject to approval by the banking supervisory authorities.

<sup>(3)</sup> Convertible And Subordinated Hybrid Equity-linked Securities (CASHES) issued by BNP Paribas Fortis (previously Fortis Banque) in December 2007.

The CASHES are perpetual securities but may be exchanged for Ageas (previously Fortis SA/NV) shares at the holder's sole discretion at a price of EUR 239.40. However, as of 19 December 2014, the CASHES will be automatically exchanged into Ageas shares if their price is equal to or higher than EUR 359.10 for twenty consecutive trading days. The principal amount will never be redeemed in cash. The rights of the CASHES holders are limited to the Ageas shares held by BNP Paribas Fortis and pledged to them.

Ageas and BNP Paribas Fortis have entered into a Relative Performance Note (RPN) contract, the value of which varies contractually so as to offset the impact on BNP Paribas Fortis of the relative difference between changes in the value of the CASHES and changes in the value of the Ageas shares.

Since 1 January 2022, the liability is no longer eligible to prudential own funds.

- Debt securities measured at amortised cost

<sup>(1)</sup> Conditions precedent for coupon payment :

- B Payment of the interest is mandatory, unless the Board of directors decides to postpone these payments after the Shareholders' General Meeting has officially noted that there is no income available for distribution, where this occurs within the 12-month period preceding the due date for payment of the interest. Interest payments are cumulative and are payable in full once dividend payments resume.
- C Payment of the interest is mandatory, except for cases of regulatory deficiency, in agreement with the regulator, or of suspension of payments. Interest payments are cumulative and are payable in full, once coupon payments resume, or, if these events occur before, when the issuance is redeemed or when the issuer is liquidated.
- D Payment of the interest is at full discretion and could be cancelled in whole or in part if the relevant regulator notifies based on its assessment of the financial and solvency situation of the issuer. Interest Amounts on the Notes will be non-cumulative, once coupon payments resume.
- E Payment of interest is made on a discretionary basis and may be fully or partially cancelled with the prior approval of Bank Al-Maghrib for an indefinite period and on a non-cumulative basis to meet its obligations. Interest amounts on bonds will not be cumulative when coupon payments resume.
- F Payment of interest is discretionary and may be fully or partially cancelled at any time and for any reason for an indefinite period. Interest amounts on bonds will not be cumulative when coupon payments resume.

<sup>(2)</sup> See reference relating to "Debt securities at fair value through profit or loss".

<sup>(3)</sup> These securities are no longer eligible to prudential own funds since 31 December 2023.

<sup>(4)</sup> The instruments issued by BNP Paribas SA in 2023, 2024 and 2025 are contingent convertible securities classified as financial liabilities in accounting and eligible to Additional Tier 1 capital (see note 1.f.8). The distribution from these instruments is recognised directly as a reduction from equity.

<sup>(5)</sup> The participating notes issued by BNP Paribas SA may be repurchased as provided for in the law of 3 January 1983. The number of notes in the market is 1,469,554.

<sup>(6)</sup> Depending on net income subject to a minimum of 85% of the TMO rate and a maximum of 130% of the TMO rate.

## 4.1 OFFSETTING OF FINANCIAL ASSETS AND LIABILITIES

The following tables present the amounts of financial assets and liabilities before and after offsetting. This information, required by IFRS 7, aims to enable the comparability with the accounting treatment applicable in accordance with generally accepted accounting principles in the United States (US GAAP), which are less restrictive than IAS 32 as regards offsetting.

“Amounts set off on the balance sheet” have been determined according to IAS 32. Thus, a financial asset and a financial liability are offset and the net amount presented on the balance sheet when, and only when, the Group has a legally enforceable right to set off the recognised amounts and intends either to settle on a net basis, or to realise the asset and settle the liability simultaneously. Amounts set off derive mainly from repurchase agreements and derivative instruments traded with clearing houses.

The “impacts of master netting agreements and similar agreements” are relative to outstanding amounts of transactions within an enforceable agreement, which do not meet the offsetting criteria defined by IAS 32. This is the case of transactions for which offsetting can only be performed in case of default, insolvency or bankruptcy of one of the contracting parties.

“Financial instruments given or received as collateral” include guarantee deposits and securities collateral recognised at fair value. These guarantees can only be exercised in case of default, insolvency or bankruptcy of one of the contracting parties.

Regarding master netting agreements, the guarantee deposits received or given in compensation for the positive or negative fair values of financial instruments are recognised in the balance sheet in accrued income or expenses and other assets or liabilities.

In millions of euros, at 30 June 2025	Gross amounts of financial assets	Gross amounts set off on the balance sheet	Net amounts presented on the balance sheet	Impact of Master Netting Agreements (MNA) and similar agreements	Financial instruments received as collateral	Net amounts

## 5. NOTES RELATED TO INSURANCE ACTIVITIES

### 5.a NET INCOME FROM INSURANCE ACTIVITIES

The various income and expenses of insurance contracts are broken down in the “Net income from insurance activities” as follows:

- “Insurance revenue” includes revenue from insurance activities related to groups of insurance contracts issued. Insurance revenue reflects the provision of services relating to a group of contracts in an amount corresponding to the consideration to which the insurer expects to be entitled in exchange for those services;
- “Insurance service expenses”<sup>(1)</sup>: actual charges attributable to insurance contracts incurred over the period, changes related to past and current service, amortisation of acquisition costs, and the loss component for onerous contracts;
- “Investment return”;
- “Net finance income or expenses from insurance contracts” includes the change in the carrying amount of insurance contracts resulting from the undiscounting effect, and the financial risk including changes in financial assumptions.

In millions of euros	First half 2025	First half 2024
Insurance revenue	5,167	4,779
Insurance service expenses <sup>(1)</sup>	(4,067)	(3,683)
Investment return	2,686	6,721
Net finance income or expenses from insurance contracts	(2,572)	(6,607)
<b>Net income from insurance activities</b>	<b>1,214</b>	<b>1,210</b>

<sup>(1)</sup> Insurance service expenses include attributable expenses which amounted to - EUR 2,273 million for the first half of 2025, compared with - EUR 2,066 million for the first half of 2024 (see note 5.b).

#### • Insurance service result

“Insurance service result” includes:

- “Insurance revenue”: for contracts under the variable fee approach and under the building block approach, it represents the release of fulfilment insurance contracts cash flows over the period (excluding changes in investment component and the amount allocated to the loss component), change in the non-financial risk adjustment, amortisation of the contractual service margin for services provided over the period, the amount allocated for the amortisation of acquisition cost, and for the general measurement model specifically, experience adjustments related to premiums.

For contracts under the variable fee approach, the amortisation of the margin on contractual services is determined after adjusting the difference between the real-world expected financial return and the risk-neutral projection. The main financial assumptions underlying the calculation of the real-world expected financial return are those adopted by the Group over the horizon of the strategic plan. Beyond this horizon, the interest rate and return assumptions used are determined in line with those underlying the risk-neutral projection.

The recovery of insurance acquisition cash flows corresponds to the portion of the premiums that relate to recovering these cash flows and the same amount is recognised as an expense on the line “Amortisation of insurance acquisition cash flows”.

For contracts under the simplified measurement model, revenue represents expected cash-flows over the period.

- “Insurance service expenses” includes incurred and past claims expenses of the period (excluding repayments of investment component) and other expenses that have been incurred related to insurance activities. Other insurance service expenses include the amortisation of insurance acquisition cash flows; changes that relate to past services and changes that relate to future services. This line also includes the operating expenses and depreciation and amortisation attributable to insurance contracts.
- “Net expenses from reinsurance contracts held” are service expenses from reinsurance net of amounts recovered from reinsurers.

In millions of euros	First half 2025	First half 2024
<b>Contracts not measured under the premium allocation approach</b>	<b>3,029</b>	<b>2,732</b>
Changes in the liability for remaining coverage	1,348	1,127
Change in the risk adjustment	77	65

<b>Insurance service expenses</b>	<b>(4,067)</b>	<b>(3,683)</b>
<b>INSURANCE SERVICE RESULT</b>	<b>1,100</b>	<b>1,096</b>

- Financial result**

“Financial Result” includes “Investment return” and “Net finance income or expenses from insurance contracts.”

“Investment return” includes net income from financial instruments and from investment properties.

“Changes in fair value of underlying items of direct participation contracts” reflects the changes in value of underlying investments, for the amount which was not recognised directly in equity, and excluding the portion of these changes adjusting the contract service margin.

“Other insurance financial expenses” measured under the general model and under the simplified model represent the change in technical liabilities arising from financial risks (discount rates variations, forex rates, time value and financial variations expected in the contracts) for the amount which was not recognised directly in equity.

In millions of euros	First half 2025	First half 2024

Expenses incurred by internal distributors (see note 2.f)	(588)	(550)
Salary and employee benefit expense	(444)	(420)
Taxes and contributions	(81)	(69)
Depreciation, amortisation and impairment of property, plant and equipment and intangible assets	(71)	(62)
<b>Total expenses by type</b>	<b>(2,842)</b>	<b>(2,540)</b>
Acquisition cash flows incurred over the period	1,571	1,528
Amortisation of acquisition cash flows	(1,417)	(1,440)
<b>Total expenses by type adjusted for acquisition cash flows amortisation effect</b>	<b>(2,688)</b>	<b>(2,452)</b>
-Insurance contracts attributable expenses (see note 5.a)	(2,273)	(2,066)
-Insurance activities non attributable costs (see note 2.f)	(415)	(386)

Acquisition cash flows over the period are deducted from total expenses and amortised over the coverage period of the contracts.

## 5.c INVESTMENTS, OTHER ASSETS AND FINANCIAL LIABILITIES RELATED TO INSURANCE ACTIVITIES

### • Investments and other assets related to insurance activities

In millions of euros, at	30 June 2025			31 December 2024		
	Assets not representative of unit-linked insurance contracts	Assets representative of unit-linked accounts	Total	Assets not representative of unit-linked insurance contracts	Assets representative of unit-linked accounts	Total
Derivative financial instruments	1,166		1,166	1,731		1,731

Level 1 includes notably equity securities and liquid bonds, derivative instruments traded on organised markets (futures, options, etc.), shares of funds and UCITS, for which the net asset value is calculated on a daily basis.

Level 2 includes equity securities, government bonds, corporate debt securities, shares of funds and UCITS, and over-the-counter derivatives.

Level 3 includes units of funds and unlisted equity shares which are mainly company shares and venture capital.

- **Table of movements in Level 3 financial instruments**

For Level 3 financial instruments, the following movements occurred during the period:

	Financial assets			Financial liabilities	
	Financial instruments at fair value through profit or loss	Financial assets at fair value through equity	Total	Financial instruments at fair value through profit or loss	Total
In millions of euros					
<b>At 31 December 2024</b>	<b>16,088</b>	<b>5</b>	<b>16,093</b>	<b>(1,155)</b>	<b>(1,155)</b>

- **Financial assets at fair value through equity**

	30 June 2025		31 December 2024	
	Fair value	of which changes in value recognised directly to equity	Fair Value	of which changes in value recognised directly to equity
In millions of euros, at				
Debt securities	104,152	(6,219)	100,493	(5,341)
Equity securities	2,545	476	1,729	107
<b>Total financial assets at fair value through equity</b>	<b>106,697</b>	<b>(5,743)</b>	<b>102,222</b>	<b>(5,234)</b>

The option to recognise certain equity instruments at fair value through equity was retained in particular for shares held through strategic partnerships and shares that the Group is required to hold in order to carry out certain activities.

During the first half of 2025, the Group sold several of these investments and a net gain of + EUR 4 million was transferred to “retained earnings” (+ EUR 6 million for the first half of 2024).

- **Fair value of investment properties**

The fair value of investment properties amounted to EUR 6.9 billion at 30 June 2025, compared with EUR 7.0 billion at 31 December 2024. The value of investment properties classified in Level 3 amounted to EUR 0.6 billion at 30 June 2025, compared with EUR 0.5 billion at 31 December 2024. This classification by level depend on the measurement method used which is based on the nature of the assets and their geographical location.

The entire non-listed real estate portfolio is appraised by one or more independent third parties. Experts have professional rules for carrying out these assessments.

For buildings that are directly held, experts use three main measurement methods:

- the method by which similar transactions are compared;
- the rate of return method (rate applied to a rental basis);
- the discounted cash flows method.

The final value retained by the expert may be a compromise between these three methods.

• **Fair value of financial instruments carried at amortised cost**

In millions of euros, at	30 June 2025					31 December 2024				
	Estimated fair value				Carrying value	Estimated fair value				Carrying value

Loans and receivables	-	1,868	13	1,881	1,884	-	1,326	47	1,373	1,379

## 5.d ASSETS AND LIABILITIES RELATED TO INSURANCE CONTRACTS

The main contracts issued by the Group are (see note 1.g.2):

- insurance contracts covering risks related to persons or property measured under the general model (building block approach - BBA) or the premium allocation approach (PAA) for contracts eligible under this approach;
- life or savings contracts measured under the variable fee approach (VFA);
- reinsurance contracts issued measured under the general model or the premium allocation approach.

Reinsurance contracts held are also measured under the general model or the premium allocation approach.

Insurance and reinsurance contracts issued and reinsurance contracts held are presented on the assets or liabilities side of the balance sheet according to the overall position of the portfolios to which they belong. They are presented separately according to their valuation model: allocation method or other models (general model and variable fee approach). Reinsurance contracts held are isolated.

In millions of euros, at	30 June 2025			31 December 2024		
	Assets	Liabilities	Net (Assets) or Liabilities	Assets	Liabilities	Net (Assets) or Liabilities
Insurance contracts not measured under the premium allocation approach	24	250,321	250,297	34	244,978	244,944
Insurance contracts measured under the premium allocation approach	118	2,693	2,575	153	2,709	2,556

<sup>(1)</sup> Including receivables and liabilities attributable to insurance contracts for a net asset of EUR 784 million at 30 June 2025, compared with a net asset of EUR 765 million at 31 December 2024.

<sup>(2)</sup> Including an experience adjustment that amounted to -EUR 91 million for the first half of 2025 and to -EUR 44 million for the first half of 2024.

<sup>(3)</sup> Including finance income and expenses recognised directly in equity.

- **Discount rates and adjustment for non-financial risk**

The table below presents the average discount rates used in the measurement of savings and protection contracts for the main horizons of the euro curve.

	30 June 2025		31 December 2024	
	Savings	Protection	Savings	Protection
1 year	2.78%	1.90%	3.17%	2.24%
5 years	3.05%	2.17%	3.07%	2.14%
10 years	3.40%	2.52%	3.20%	2.27%
15 years	3.60%	2.72%	3.26%	2.33%
20 years	3.63%	2.75%	3.19%	2.26%
40 years	3.51%		3.09%	

### Discount rate

For the construction of the yield curve, an approach based on the risk-free rate has been adopted, with the following parameters:

- a risk-free yield curve, by currency, based on an approach similar to that proposed by EIOPA (European Insurance and Occupational Pensions Authority) in the prudential framework, with two components:
  - observable and liquid market component: rates are determined by reference to market financial instruments that comply with liquidity, consistency with liabilities and adjusted to limit the impact of credit risk;
  - the long-term interest rate transition component: it enables to extrapolate the yield curve for maturities beyond the liquid portion observable on the market.
- a liquidity premium applicable to specific types of contracts, based on assets held.

For savings contracts valued according to the variable fee method, for which the fulfilment cash flows take into account the return on underlying financial assets, the risk-free yield curve is supplemented by a liquidity premium calculated on the basis of the portfolio of assets backing the savings and the retirement contracts. By assumption, bonds (sovereign and corporate) and diversified financial assets benefit from a liquidity premium (or illiquidity premium). The average liquidity premium on all savings portfolios (in France, Italy and Luxembourg) is 0.86 % at 30 June 2025, compared with 0.91% at 31 December 2024.

For protection contracts measured under the general model and for liabilities for incurred claims under the simplified approach, the discounting rate consists of the risk-free rate adjusted to reflect the illiquidity of liabilities. For protection, the liquidity premium is currently valued at zero due to the short settlement period for claims on the main risks covered.

### Adjustment for non-financial risks

For savings contracts the risk adjustment is determined according to the cost of capital method, without taking into account the risk of massive lapses, including future payments, and considering only attributable expenses. It is measured within a confidence range of 60% and 70%. This one corresponds to a level of confidence of 66 % at 30 June 2025, compared with 65 % at 31 December 2024.

For protection contracts, the level of confidence used in determining the adjustment for non-financial risks for the main countries is 70% (based on the quantile method).

## 6. FINANCING AND GUARANTEE COMMITMENTS

### 6.a FINANCING COMMITMENTS GIVEN OR RECEIVED

In millions of euros, at	30 June 2025	31 December 2024
<b>Financing commitments given</b>		
- to credit institutions	12,491	5,345

### 6.b GUARANTEE COMMITMENTS GIVEN BY SIGNATURE

In millions of euros, at	30 June 2025	31 December 2024
<b>Guarantee commitments given</b>		
- to credit institutions	85,302	82,872
- to customers	124,075	125,447
Financial guarantees	69,411	70,266
Other guarantees	54,664	55,181
<b>Total guarantee commitments given</b>	<b>209,377</b>	<b>208,319</b>
of which stage 1	200,273	197,003
of which stage 2	7,338	9,562
of which stage 3	1,120	1,054
of which insurance activities	646	700

The Group's annual contribution to the European Union's Single Resolution Fund may be partly in the form of an irrevocable payment commitment (IPC) guaranteed by a cash deposit of the same amount.

In the event of the fund being involved in a resolution action, the Single Resolution Board (SRB) shall call part or all of the irrevocable payment commitments.

The IPC is qualified as a contingent liability. A provision is recognised if the probability of a commitment call by the fund exceeds 50%. Based on the risk assessment carried out by the Group, this probability is estimated to be below this threshold. Consequently, no provision was recognised by the Group at 30 June 2025.

Pending the ruling of the European Court of Justice on the BNP Paribas Public Sector case regarding the IPC, the Group continues monitoring the legal developments and their potential impacts.

IPC amounted to EUR 1,263 million at 30 June 2025 (unchanged compared with 31 December 2024).

Cash provided as collateral for an equivalent amount is remunerated and recognised as a financial asset at amortised cost within the line "Other debtors and miscellaneous assets" (see note 4.i *Accrued income/expense and other assets/liabilities*).

## 6.c SECURITIES COMMITMENTS

In connection with the settlement date accounting for securities, commitments representing securities to be delivered or securities to be received are the following:

In millions of euros, at	30 June 2025	31 December 2024
Securities to be delivered	46,687	20,929
Securities to be received	53,541	20,915

## 7. ADDITIONAL INFORMATION

### 7.a CHANGES IN SHARE CAPITAL AND EARNINGS PER SHARE

At 30 June 2025, the share capital of BNP Paribas SA amounted to EUR 2,261,621,342 and was divided into 1,130,810,671 shares. The nominal value of each share is EUR 2 (unchanged from 31 December 2024).

- Ordinary shares issued by BNP Paribas and held by the Group**

<sup>(1)</sup> Transactions realised in the framework of an activity of trading and arbitrage transactions on equity indices.

During the first half year 2025, BNP Paribas SA bought back on the market 14,025,914 of its own shares in accordance with the Board of Directors' decision of 3 February 2025 to proceed to the share buyback of EUR 1,084 million. The cancellation of these shares involves the payment of a tax on decreases of capital consequently to share buyback, amounting to EUR 19 million.

The carrying amount of ordinary shares issued by BNP Paribas and held by the Group are deducted from equity, representing an amount of EUR 985 million at 30 June 2025.

- Undated super subordinated notes eligible as Tier 1 regulatory capital**

BNP Paribas SA has issued undated super subordinated notes which pay a fixed, fixed adjustable or floating-rate coupon and are redeemable at the end of a fixed period and thereafter at each coupon date or every five years.

On 25 March 2024, BNP Paribas SA redeemed the March 2019 issue, for an amount of USD 1,500 million, at the first call date. These notes paid a 6.625% fixed-rate coupon.

On 10 January 2025, BNP Paribas SA redeemed the July 2019 issue, for an amount of AUD 300 million, at the first call date. These notes paid a 4.5% fixed-rate coupon.

The following table summarises the characteristics of these various issues:

Date of issue	Currency	Amount (in millions of currency units)	Coupon payment date	Rate and term before 1st call date		Rate after 1st call date
August 2015	USD	1,500	semi-annual	7.375%	10 years	USD 5-year swap + 5.150%
November 2017	USD	750	semi-annual	5.125%	10 years	USD 5-year swap + 2.838%
August 2018	USD	750	semi-annual	7.000%	10 years	USD 5-year swap + 3.980%
February 2020	USD	1,750	semi-annual	4.500%	10 years	US 5-year CMT + 2.944%
February 2021	USD	1,250	semi-annual	4.625%	10 years	US 5-year CMT + 3.340%
January 2022	USD	1,250	semi-annual	4.625%	5 years	US 5-year CMT + 3.196%
August 2022	USD	2,000	semi-annual	7.750%	7 years	US 5-year CMT + 4.899%

November 2022	USD	1,000	semi-annual	9.250%	5 years	US 5-year CMT + 4.969%
January 2023	EUR	1,250	semi-annual	7.375%	7 years	EUR 5-year Mid-swap + 4.631%
February 2023	SGD	600	semi-annual	5.900%	5 years	SGD SORA 5-year + 2.674%
<b>Total euro-equivalent historical value at 30 June 2025</b>		<b>11,960<sup>(1)</sup></b>				

<sup>(1)</sup> Net of shares held in treasury by Group entities

BNP Paribas has the option of not paying interest due on these undated super subordinated notes. Unpaid interest is not carried forward.

For notes issued before 2015, the absence of coupon payment is conditional on the absence of dividend payment on BNP Paribas SA ordinary shares or on undated super subordinated note equivalents during the previous year. Interest due is payable once dividend payment on BNP Paribas SA ordinary shares resumes.

The contracts relating to these undated super subordinated notes contain a loss absorption clause. Under the terms of this clause, in the event of insufficient regulatory capital, the nominal value of the notes may be reduced in order to serve as a new basis for the calculation of the related coupons until the capital deficiency is made up and the nominal value of the notes is increased to its original amount.

The proceeds from these issues are recorded in equity under "Capital and retained earnings". In accordance with IAS 21, issues denominated in foreign currencies are recognised at their historical value based on their translation into euros at the issue date. Interest on the instruments is deducted from shareholders' equity.

At 30 June 2025, the BNP Paribas Group held EUR 13 million of its owns undated super subordinated notes which were deducted from shareholders' equity.

## • Earnings per share

Basic earnings per share are calculated by dividing the net income for the period attributable to holders of ordinary shares by the weighted average number of ordinary shares outstanding during the period. The net income attributable to ordinary shareholders is determined by deducting the net income attributable to holders of preferred shares.

Diluted earnings per share correspond to the net income for the period attributable to holders of ordinary shares, divided by the weighted average number of shares outstanding as adjusted for the maximum effect of the conversion of dilutive equity instruments into ordinary shares. In-the-money stock subscription options are taken into account in the diluted earnings per share calculation, as are performance shares granted under the Global Share-based Incentive Plan. Conversion of these instruments would have no effect on the net income figure used in this calculation. All stock option and performance share plans are expired.

	First half 2025	First half 2024
<b>Net profit used to calculate basic and diluted earnings per ordinary share (in millions of euros) <sup>(1)</sup></b>	<b>5,834</b>	<b>6,051</b>
<b>Weighted average number of ordinary shares outstanding during the year</b>	<b>1,126,044,287</b>	<b>1,137,648,633</b>
Effect of potentially dilutive ordinary shares	-	-
<b>Weighted average number of ordinary shares used to calculate diluted earnings per share</b>	<b>1,126,044,287</b>	<b>1,137,648,633</b>
<b>Basic earnings per share (in euros)</b>	<b>5.18</b>	<b>5.32</b>
<b>Diluted earnings per share (in euros)</b>	<b>5.18</b>	<b>5.32</b>

<sup>(1)</sup>The net profit used to calculate basic and diluted earnings per share is the net profit attributable to equity shareholders, adjusted for the remuneration on the undated super subordinated notes issued by BNP Paribas SA treated as preferred share equivalents, and on the convertible contingent bonds deducted from shareholders' equity, as well as the related foreign exchange gain or loss impact recognised directly in shareholders' equity in case of repurchase.

The dividend per share paid in 2025 out of the 2024 net income amounted to EUR 4.79 (compared with EUR 4.60 out of the 2023 net income).

The distribution amounts to EUR 5,413 million, compared with EUR 5,198 million paid in 2024.

This distribution is raised to 60% of the 2024 net income with a share buyback programme of EUR 1,084 million, realised during the first half of 2025.

The Board of directors of 23 July 2025 approved the payment of an interim dividend in September 2025, corresponding to 50% of the earnings per share as of June 30, 2025, amounting to €2.59 per share.

Based on the number of shares issued as of June 30, 2025, the distribution would amount to EUR 2,929 million.

- **Commitments to repurchase minority shareholders' interests**

In connection with the acquisition of certain entities, the Group granted minority shareholders put options on their holdings.

The total value of these commitments, which are recorded as a reduction in shareholders' equity, amounted to EUR 368 million at 30 June 2025, compared with EUR 369 million at 31 December 2024.

## 7.c LEGAL PROCEEDINGS AND ARBITRATION

BNP Paribas (the “Bank”) is party as a defendant in various claims, disputes and legal proceedings (including investigations by judicial or supervisory authorities) in a number of jurisdictions arising in the ordinary course of its business, including *inter alia* in connection with its activities as market counterparty, lender, employer, investor and taxpayer.

The related risks have been assessed by the Bank and are subject, where appropriate, to provisions disclosed in notes 4.k *Provisions for contingencies and charges* and 4.d *Financial assets at amortised cost*; a provision is recognised when it is probable that an outflow of resources embodying economic benefits will be required to settle an obligation arising from a past event and a reliable estimate can be made of the amount of the obligation.

The main contingent liabilities related to pending legal, governmental, or arbitral proceedings as of 30 June 2025 are described below. The Bank currently considers that none of these proceedings is likely to have a material adverse effect on its financial position or profitability; however, the outcome of legal or governmental proceedings is by definition unpredictable.

The Bank and certain of its subsidiaries are defendants in several actions pending before the United States Bankruptcy Court for the Southern District of New York brought by the Trustee appointed for the liquidation of Bernard L. Madoff Investment Securities LLC (“BLMIS”). These actions, known generally as “clawback claims”, are similar to those brought by the BLMIS Trustee under the US Bankruptcy Code and New York state law against numerous institutions, and seek recovery of amounts allegedly received by BNP Paribas entities from BLMIS or indirectly through BLMIS-related “feeder funds” in which BNP Paribas entities held interests.

As a result of certain decisions of the Bankruptcy Court and the United States District Court between 2016 and 2018, the majority of the BLMIS Trustee’s actions were either dismissed or substantially narrowed. However, those decisions were either reversed or effectively overruled by subsequent decisions of the United States Court of Appeals for the Second Circuit issued on 25 February 2019 and 30 August 2021. As a result, the BLMIS Trustee refiled certain of these actions and, as of end May 2023, had asserted claims amounting in the aggregate to approximately USD 1.2 billion. Since March 2025, following the dismissal of certain of the BLMIS Trustee’s actions or claims, the aggregate amount of the claims stood at approximately USD 1.1 billion. BNP Paribas has substantial and credible defences to these actions and is defending against them vigorously.

Litigation was brought in Belgium by minority shareholders of the previous Fortis Group against the Société Fédérale de Participations et d’Investissement, Ageas and BNP Paribas seeking (amongst other things) damages from BNP Paribas as restitution for part of the BNP Paribas Fortis shares that were contributed to BNP Paribas in 2009, on the ground that the transfer of these shares was null and void. On 29 April 2016, the Brussels Commercial court decided to stay the proceedings until the resolution of the pending Fortis criminal proceeding in Belgium. The criminal proceeding, in which the Public Prosecutor had requested a dismissal, is definitively closed, as the Council Chamber of the Brussels Court of first instance issued on 4 September 2020 a ruling (which since became final) that the charges were time-barred. Certain minority shareholders continued the civil proceedings against BNP Paribas and the Société Fédérale de Participations et d’Investissement before the Brussels Commercial court. By a judgment dated 3 April, 2025, the court dismissed all of the claims made by these shareholders on the grounds that they are inadmissible, time-barred or without merit.

On 26 February 2020, the Paris Criminal Court found BNP Paribas Personal Finance guilty of misleading commercial practice and concealment of this practice. BNP Paribas Personal Finance was ordered to pay a fine of EUR 187,500 and damages and legal fees to the civil plaintiffs. On 28 November 2023, the Paris Court of Appeals upheld the Paris Criminal Court’s decision relating to misleading commercial practice and the concealment of those practices. As for the damages owed to the civil plaintiffs, though the Paris Court of Appeals adjusted the calculation methodology, the majority of the damages had already been paid by provisional enforcement of the Paris Criminal Court’s judgment. An agreement was also entered into with the Consommation Logement Cadre de Vie association to settle the case with customers wishing to do so.

The Bank and one of its US subsidiaries are defendants in a civil class action and related individual actions seeking money damages pending before the United States District Court for the Southern District of New York brought by former Sudanese citizens, now US citizens and legal residents, claiming they were injured by the government of Sudan between 1997 and 2011. Plaintiffs base their claims on the historical facts set forth in the Bank’s 30 June 2014 settlement agreements with US authorities concerning the processing of financial transactions for entities in certain countries subject to US economic sanctions. In early 2024, both the Board of Governors of the Federal Reserve in the United States and the Secrétariat Général of the Autorité de Contrôle Prudentiel et de Résolution in France announced the end of BNP Paribas’s probationary period and the termination of the Cease-and-Desist Order entered into in 2014, marking the completion of BNP Paribas Group’s US sanctions remediation as set forth under this Cease-and-Desist Order. Plaintiffs allege that the transactions processed by the Bank, predominately through

its Swiss-based subsidiary (now a branch of the Bank), with Sudanese entities subject to US sanctions make the Bank and its US subsidiary liable for injuries perpetrated to plaintiffs by the government of Sudan. On 9 May 2024, the District Court granted plaintiffs' motion to proceed as a class of all refugees or asylees admitted by the United States who formerly lived in Sudan or South Sudan between November 1997 and December 2011. The District Court subsequently set 8 September 2025 as the date for the trial of the claims of three of the named individual plaintiffs in the action. BNP Paribas has substantial and credible defences to these actions and is defending against them vigorously.

BNP Paribas Bank Polska holds mortgage loan portfolios in Swiss franc or indexed to the Swiss franc. The Swiss franc loan agreements, a majority of which were concluded in 2006-2008, were entered into in accordance with industry practices at the time of entry. Like many other financial institutions in Poland, BNP Paribas Bank Polska is a defendant in civil proceedings with retail customers who took out these Swiss franc mortgage loans. BNP Paribas Bank Polska is not a party to any class action proceeding in relation to such mortgage loan agreements.

As at 31 December 2024, BNP Paribas Bank Polska was a defendant in 6,596 individual pending court proceedings, in which plaintiffs are demanding either a declaration of invalidity or a declaration of non-enforceability of the mortgage loan agreement and the reimbursement of the payments made thereunder to date. The significant number of claims against banks in relation to these mortgage loans is believed to have been impacted by changes in exchange rates since 2009, and developments in EU and Polish court rulings since 2019. In particular, Polish courts to date have, in the vast majority of cases, ruled that such mortgage loan agreements were invalid or non-enforceable. Since December 2021, BNP Paribas Bank Polska has been conducting individual negotiations with clients with whom it remains in dispute or with whom there is a reasonable risk of entering into a dispute.

Like many other financial institutions in the banking, investment, mutual funds and brokerage sectors, the Bank has received or may receive requests for information from, or be subject to investigations by supervisory, governmental or self-regulatory agencies. The Bank responds to such requests and cooperates with the relevant authorities and regulators and seeks to address and remedy any issues that may arise.

In 2023, BNP Paribas premises (along with those of other financial institutions) were searched by the French financial prosecutor's office; BNP Paribas was informed that the office had opened a preliminary investigation relating to French securities transactions.

There are no other legal, governmental or arbitral proceedings (including any such proceedings which are pending or threatened) that could have, or during the last twelve months have had, significant effects on the Bank's financial condition or profitability.

## 7.d BUSINESS COMBINATIONS AND LOSS OF CONTROL OR SIGNIFICANT INFLUENCE

### Operation of the first half of 2025

- **Pinnacle Pet Holding**

On 31 March 2025, the shareholders' agreement was amended to reflect the change in the nature of the investment in the Pinnacle Pet Holding (PPH) group, from an industrial partnership where Cardif's insurance expertise was key to a purely financial investment.

Following the modification of the shareholders' agreement and as BNP Paribas Cardif is no longer represented on the Boards of Directors of PPH and its subsidiaries, the Group BNP Paribas lost significant influence over the PPH group.

The loss of significant influence led to the recognition of a net gain of EUR 158 million.

### Operations of the first half of 2024

- **UkrSibbank**

The easing of a number of restrictions previously imposed by the National Bank of Ukraine made it possible to re-establish the conditions for exercising control as defined by IFRS 10, which had the effect of changing the consolidation method from equity method to full consolidation method.

This change of consolidation method was reflected in the increase in the Group's balance sheet of EUR 3 billion, in particular in financial assets at amortised cost and led to the recognition of a badwill of EUR 226 million.

- **Cetelem SA de CV**

On 27 March 2024, BNP Paribas Personal Finance sold 80% of its stake of its Mexican subsidiary Cetelem SA de CV.

The Group BNP Paribas lost exclusive control of this entity but kept a significant influence.

This partial disposal is accompanied by an agreement for the future disposal of the residual interest, thereby depriving the Group of the return on the shares held, and leading to the recognition of a debt of EUR 125 million.

The loss of control led to the recognition of a net gain on disposal of EUR 119 million and to a decrease of the Group's balance sheet by EUR 3 billion, in particular in financial assets at amortised cost.

- **BCC Vita SpA**

On 15 May 2024, BNP Paribas Cardif SA acquired 51% of the capital of BCC Vita SpA, together with a purchase agreement of 19% additional holding.

BNP Paribas Group acquired exclusive control of this entity to the extent of 70% and the entity was consolidated using the full consolidation method.

This transaction resulted in the increase of the Group's balance sheet at the acquisition date by EUR 4 billion, in particular in investments in insurance activities.

The goodwill related to this operation was EUR 107 million, of which EUR 7 million recognised during the first half year of 2025

### Operation of the second half of 2024

- **Neuflize Vie**

On 31 October 2024, BNP Paribas Cardif SA acquired 100% of the capital of Neuflize Vie.

BNP Paribas Group acquired exclusive control of this entity and the entity was consolidated in full consolidation method.

This transaction resulted in the increase of the Group's balance sheet at the acquisition date by EUR 12 billion, in particular in investments in insurance activities.

The badwill related to this operation was EUR 63 million, including an adjustment of fair value of assets and liabilities of EUR 48 million, recognized on the first half of 2025.

## 7.e EVENT AFTER THE REPORTING PERIOD

On 1 July 2025, BNP Paribas Cardif acquired 100 % of AXA Investment Managers (AXA IM) and signed a long-term partnership with the AXA Group to manage a large part of its assets. The transactions price amounted to EUR 5.1 billion and was paid in cash.

This operation will enable the BNP Paribas Group to create a leading European asset management platform with over EUR 1.5 trillion in assets under management entrusted by its clients. It allows the Group to become the European leader in long-term savings management for insurers and pension funds with around EUR 850 billion, with the ambition to become the European leader in fund collection for private asset investments and positioning itself among the main providers of ETFs in Europe.

The AXA IM group will thus be fully consolidated into the BNP Paribas Group starting from the third quarter 2025, leading to an increase of about EUR 5 billion in the Group's balance sheet at the acquisition date.

A project to merge the legal entities of AXA IM, BNP Paribas AM and BNP Paribas REIM, which would create a new platform held by BNP Paribas Cardif, is currently being designed.

## 7.f FAIR VALUE OF FINANCIAL INSTRUMENTS CARRIED AT AMORTISED COST

The information supplied in this note must be used and interpreted with the greatest caution for the following reasons:

- these fair values are an estimate of the value of the relevant instruments at 30 June 2025. They are liable to fluctuate from day to day as a result of changes in various parameters, such as interest rates and credit quality of the counterparty. In particular, they may differ significantly from the amounts actually received or paid on maturity of the instrument. In most cases, the fair value is not intended to be realised immediately, and in practice might not be realised immediately. Consequently, this fair value does not reflect the actual value of the instrument to BNP Paribas as a going concern;
- most of these fair values are not meaningful, and hence are not taken into account in the management of the commercial banking activities which use these instruments;
- estimating a fair value for financial instruments carried at historical cost often requires the use of modelling techniques, hypotheses and assumptions that may vary from bank to bank. This means that comparisons between the fair values of financial instruments carried at historical cost as disclosed by different banks may not be meaningful;
- the fair values shown below do not include the fair values of finance lease transactions, non-financial instruments such as property, plant and equipment, goodwill and other intangible assets such as the value attributed to demand deposit portfolios or customer relationships. Consequently, these fair values should not be regarded as the actual contribution of the instruments concerned to the overall valuation of the BNP Paribas Group.

In millions of euros, at 30 June 2025	Estimated fair value				Carrying value
	Level 1	Level 2	Level 3	Total

<sup>(1)</sup> Finance leases excluded

The valuation techniques and assumptions used by BNP Paribas ensure that the fair value of financial assets and liabilities carried at amortised cost is measured on a consistent basis throughout the Group. Fair value is based on prices quoted in an active market when these are available. In other cases, fair value is determined using valuation techniques such as discounting of estimated future cash flows for loans, liabilities and debt securities at amortised cost, or specific valuation models for other financial instruments as described in note 1, *Summary of material accounting policies applied by the BNP Paribas Group*. The description of the fair value hierarchy levels is also presented in the accounting principles (see note 1.f.10). In the case of loans, liabilities and debt securities at amortised cost that have an initial maturity of less than one year (including demand deposits) or of most regulated savings products, fair value equates to carrying amount. These instruments have been classified in Level 2, except for loans to customers, which are classified in Level 3.

## 7.g SCOPE OF CONSOLIDATION

BNP Paribas, a *société anonyme* (Public Limited Company), registered in France, is the Group's lead company, which holds key positions in its three operating divisions: Corporate & Institutional Banking (CIB), Commercial, Personal Banking & Services (CPBS) and Investment & Protection Services (IPS).

During the year, the parent company did not change its name. BNP Paribas has its principal place of business in France and its head office is located at 16 boulevard des Italiens 75009 Paris, France.
