Breakdown in gross balance-sheet credit exposure<sup>4</sup>

## RESILIENCE | The 2025 EBA stress<sup>1</sup> test proves our resilient profile in a significant shock

### Our best EBA stress test, relative and absolute since 2016

- Our P2G quantitatively based on EBA stress test complements our P2R, which remains one of the lowest amongst major European banks

### Depletion 2025 peak to trough of 235 bps (398 bps in 2023)

- ~50% of CET1 depletion from NPL backstop which is a regulatory deduction, unrealistically conservative, not an actual loss ; static balance sheet assumption does not allow recoveries of NPL
- Much less punitive treatment of Net Trading Income (NTI) ; ~80% of client revenues 'retained' in 2025 vs ~40% in 2023
- RWA increase less sizeable and less volatile given a starting point already under CRR3 : +€35bn in 2025 vs +€120bn in 2023
- Our stressed leverage ratio at 3.86% never falls below MDA restriction level of 3.85%

### Move to P2G bucket #1: implied P2G of 0-100 bps from 50-200 bps previously<sup>2</sup>
